KEY FEATURES

Six pillars

01

Verified Practitioners

Government-authenticated doctors with online booking.

02

Authentic Products

Verified herbal medicines with supply-chain transparency.

03

Medicine Delivery

Doorstep delivery direct from verified pharmacies.

04

Emergency Services

Snake bite and fracture centres located instantly.

05

Tourist Safety

English-language wellness centres with safety certification.

06

Digital Records

Secure electronic medical records for continuous care.

HOW IT WORKS

Three simple steps to natural healing

01

Register & Verify

Create a secure account and complete your health profile through OTP-verified registration.

02

Book or Shop

Channel a verified practitioner or send a prescription to a verified Ayurveda pharmacy.

03

Heal Naturally

Receive your treatment plan and medicine, with the whole history kept on your record.

THE TEAM

The minds behind Lakwedha

W.G. Avishka Madushan

Project Leader & Full-Stack Developer

Technical architecture and full-stack delivery

Govindu Dandeniya

Frontend Developer

Intuitive, responsive interfaces

Ilham Faiz

Mobile Developer

Fast, modern mobile experience

Ahamad Mubarak

Backend & Database Architect

Robust, scalable infrastructure

Thisara Sesath

UI/UX Designer & QA Engineer

Design systems and quality standards

Sandaru Pasan

DevOps & Security Specialist

Secure deployment and reliability

01 — THE IDEA

Trust, first.

Sri Lanka's Ayurveda sector runs largely offline. Patients cannot tell a registered practitioner from an unverified one, and genuine herbal medicine has no traceability.

Lakwedha starts from a single promise: every doctor, pharmacy and centre on the platform is verified before a patient ever sees them.

ONBOARDING

Four steps. Verified from the start.

Nationality-aware registration, OTP-verified mobile numbers, guest browsing for first-time visitors — with validation at every step.

PATIENT APP

One home for every service

Channeling, pharmacy, emergency help and daily Ayurveda guidance — reachable in one tap from the home screen.

CHANNELING

Find a verified practitioner

- 01** Search by doctor name, hospital, specialization or date
- 02** Only government-registered practitioners are listed
- 03** Live session availability with channeling fee in LKR

Book it. Track it. Cancel it if life happens.

Upcoming & past, separated

Tabbed history with appointment numbers for every visit.

Cancellation requests

Patients request, the doctor's portal approves — no silent no-shows.

Status you can trust

Confirmed, completed or cancelled, synced across all portals.

REAL-TIME ALERTS

Nobody misses an appointment

- Booking
- Payment
- Reminder

EMERGENCY SERVICES

Snake bites don't wait for office hours

Traditional Ayurveda holds specialised treatment for snake bites, fractures, burns and poisoning. Lakwedha locates the nearest centre that actually treats your emergency type — day or night.

Snake bite

Fractures

Burns

Poisoning

PHARMACY NETWORK

Province. District. City.

A hierarchical locator built on Sri Lanka's real administrative structure, so a patient in Dehiwala never gets shown an Osusala in Jaffna.

Every listed pharmacy is approved through the admin portal before it can receive a single prescription.

ORDER LIFECYCLE

Upload a prescription, watch it move

No fixed catalogue pricing. The patient uploads a prescription, the verified pharmacy reviews it and sets a price, and the patient pays only after seeing that price — with the order state visible at every step.

DIGITAL RECORDS

Your care history, in one place

Saved doctors, pending orders
and every past appointment —
continuity of care without
paper files.

My Doctors

Channel a trusted practitioner again in two taps.

Orders needing attention

Unpaid and pending pharmacy orders surfaced
on the profile itself.

Appointment history

Every visit with its reference number, retained for
future consultations.

SECURITY

Health data deserves better than a weak password

Hashed credentials, OTP-verified recovery by email or mobile, enforced password strength and photo-backed identity — patients control their own record.

WEB PORTAL

Three roles, one front door

Doctor, Pharmacy and Admin authenticate through the same portal — then land in completely separate, permission-scoped workspaces.

The screenshot shows a web browser window with a light blue background. In the center is a white login card with a green header. The header contains a green square icon with a white stethoscope, the text 'Lakwedha' in bold, and 'AYURVEDIC PORTAL' in smaller text. Below the header are three tabs: 'Doctor' (active, green), 'Pharmacy' (grey), and 'Admin' (grey). The 'Doctor' tab is selected. Below the tabs are two input fields: 'Email Address *' and 'Password *'. The 'Email Address' field has a green border and placeholder text 'Email Address'. The 'Password' field has a grey border, placeholder text 'Password', and a toggle icon (an eye) on the right. Below the input fields is a large green button with the text 'Sign In as Doctor'. At the bottom of the card, there is a link: 'New here? [Create an account](#)'.

The practitioner's morning screen

Today's appointments, upcoming sessions, lifetime patient count and a one-click session cancellation that notifies every affected patient automatically.

No 2	Mr Avishka Madushan	Age 20	Completed		
No 3	Mr Avishka Madushan	Age 20	Upcoming		

Aurveda Doctor Portal v1.0

Patient number, age, status and EMR access in one row — a doctor who channels at three hospitals sees each queue separately instead of one flat list.

RECORDS

Every visit, remembered

A registry of the practitioner's own patients with visit counts, last-seen dates and a route into the electronic medical record for each one.

AVAILABILITY

Doctors release the slots themselves

Release a session

Hospital, date, time and slot capacity in one action.

Live slot counter

3 / 12 booked, updated the moment a patient confirms.

Calendar view

Open, completed and cancelled sessions per month.

EDGE CASE, SOLVED

What if every slot is already booked?

The patient submits an urgent extra-appointment request. The doctor sees it in a dedicated queue and can accept beyond capacity — the same courtesy that already happens verbally at the clinic counter, now recorded.

The badge has to mean something

Qualifications, clinic information and specialization are submitted by the doctor, approved by the admin, and only then does the verified badge appear to patients.

Built for the Osusala counter

Pending requests, prices sent, paid orders and completed deliveries — four numbers that tell a pharmacy owner exactly what to do next.

PRESCRIPTION REQUESTS

Review, price, respond

Every request carries the patient's name, contact, delivery address and the uploaded prescription image. The pharmacy sets a price and the patient is notified instantly — the loop closes in minutes, not days.

FULFILMENT

From paid to delivered

Paid orders move into a fulfilment board. Each status change pushes a notification to the patient's phone, so nobody has to call the pharmacy to ask "is it ready?".

The gatekeeper of the platform

Doctors, pharmacies, patients, appointments, orders, payments, hospitals and emergency centres — approvals and oversight for all of it in a single console.

Numbers the ministry could audit

Patient growth, active practitioners, appointment volume, order counts and revenue in LKR — the reporting layer a national Ayurveda programme would need.

Preserving ancient wisdom through modern technology.

Lakwedha is open to feedback from Ayurvedic practitioners, pharmacies and health-tech teams. If this problem interests you, I would genuinely like to talk.
