

Avishka.

Personal Portfolio Website

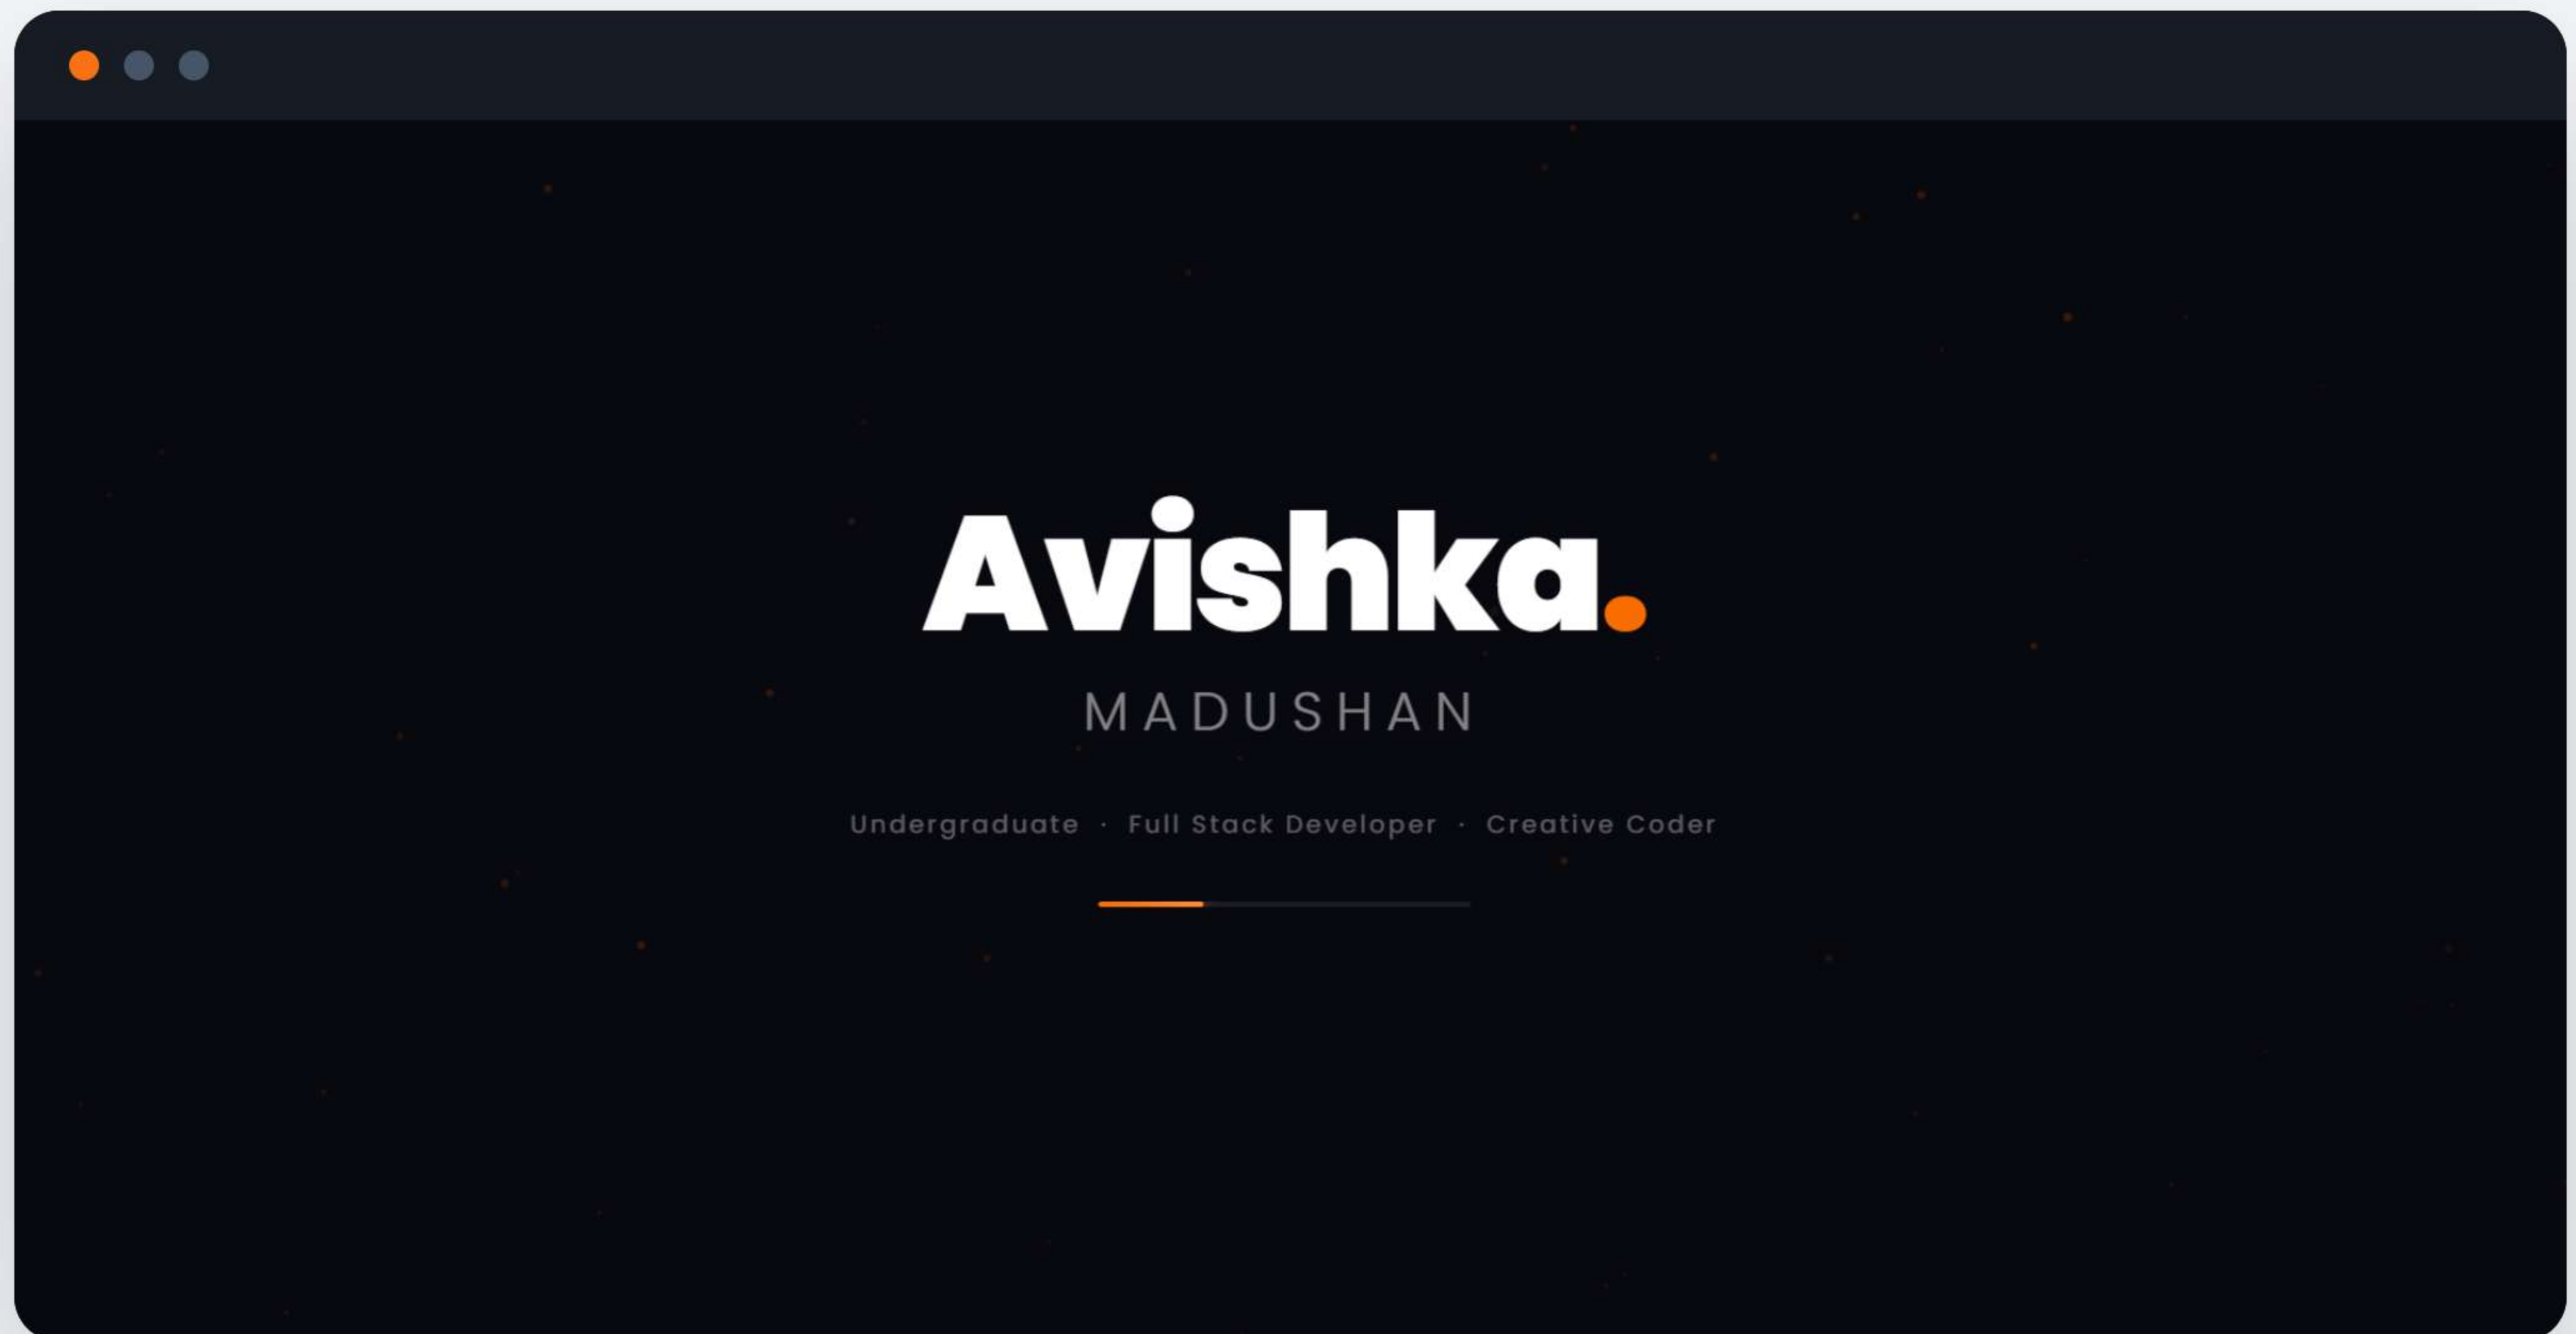

A responsive, single-page portfolio engineered from scratch HTML5, CSS3 and vanilla JavaScript, no build step, deployed on GitHub Pages behind a custom domain.

www.avishkamadushan.lk

INDIVIDUAL PROJECT

A splash screen drawn on canvas.

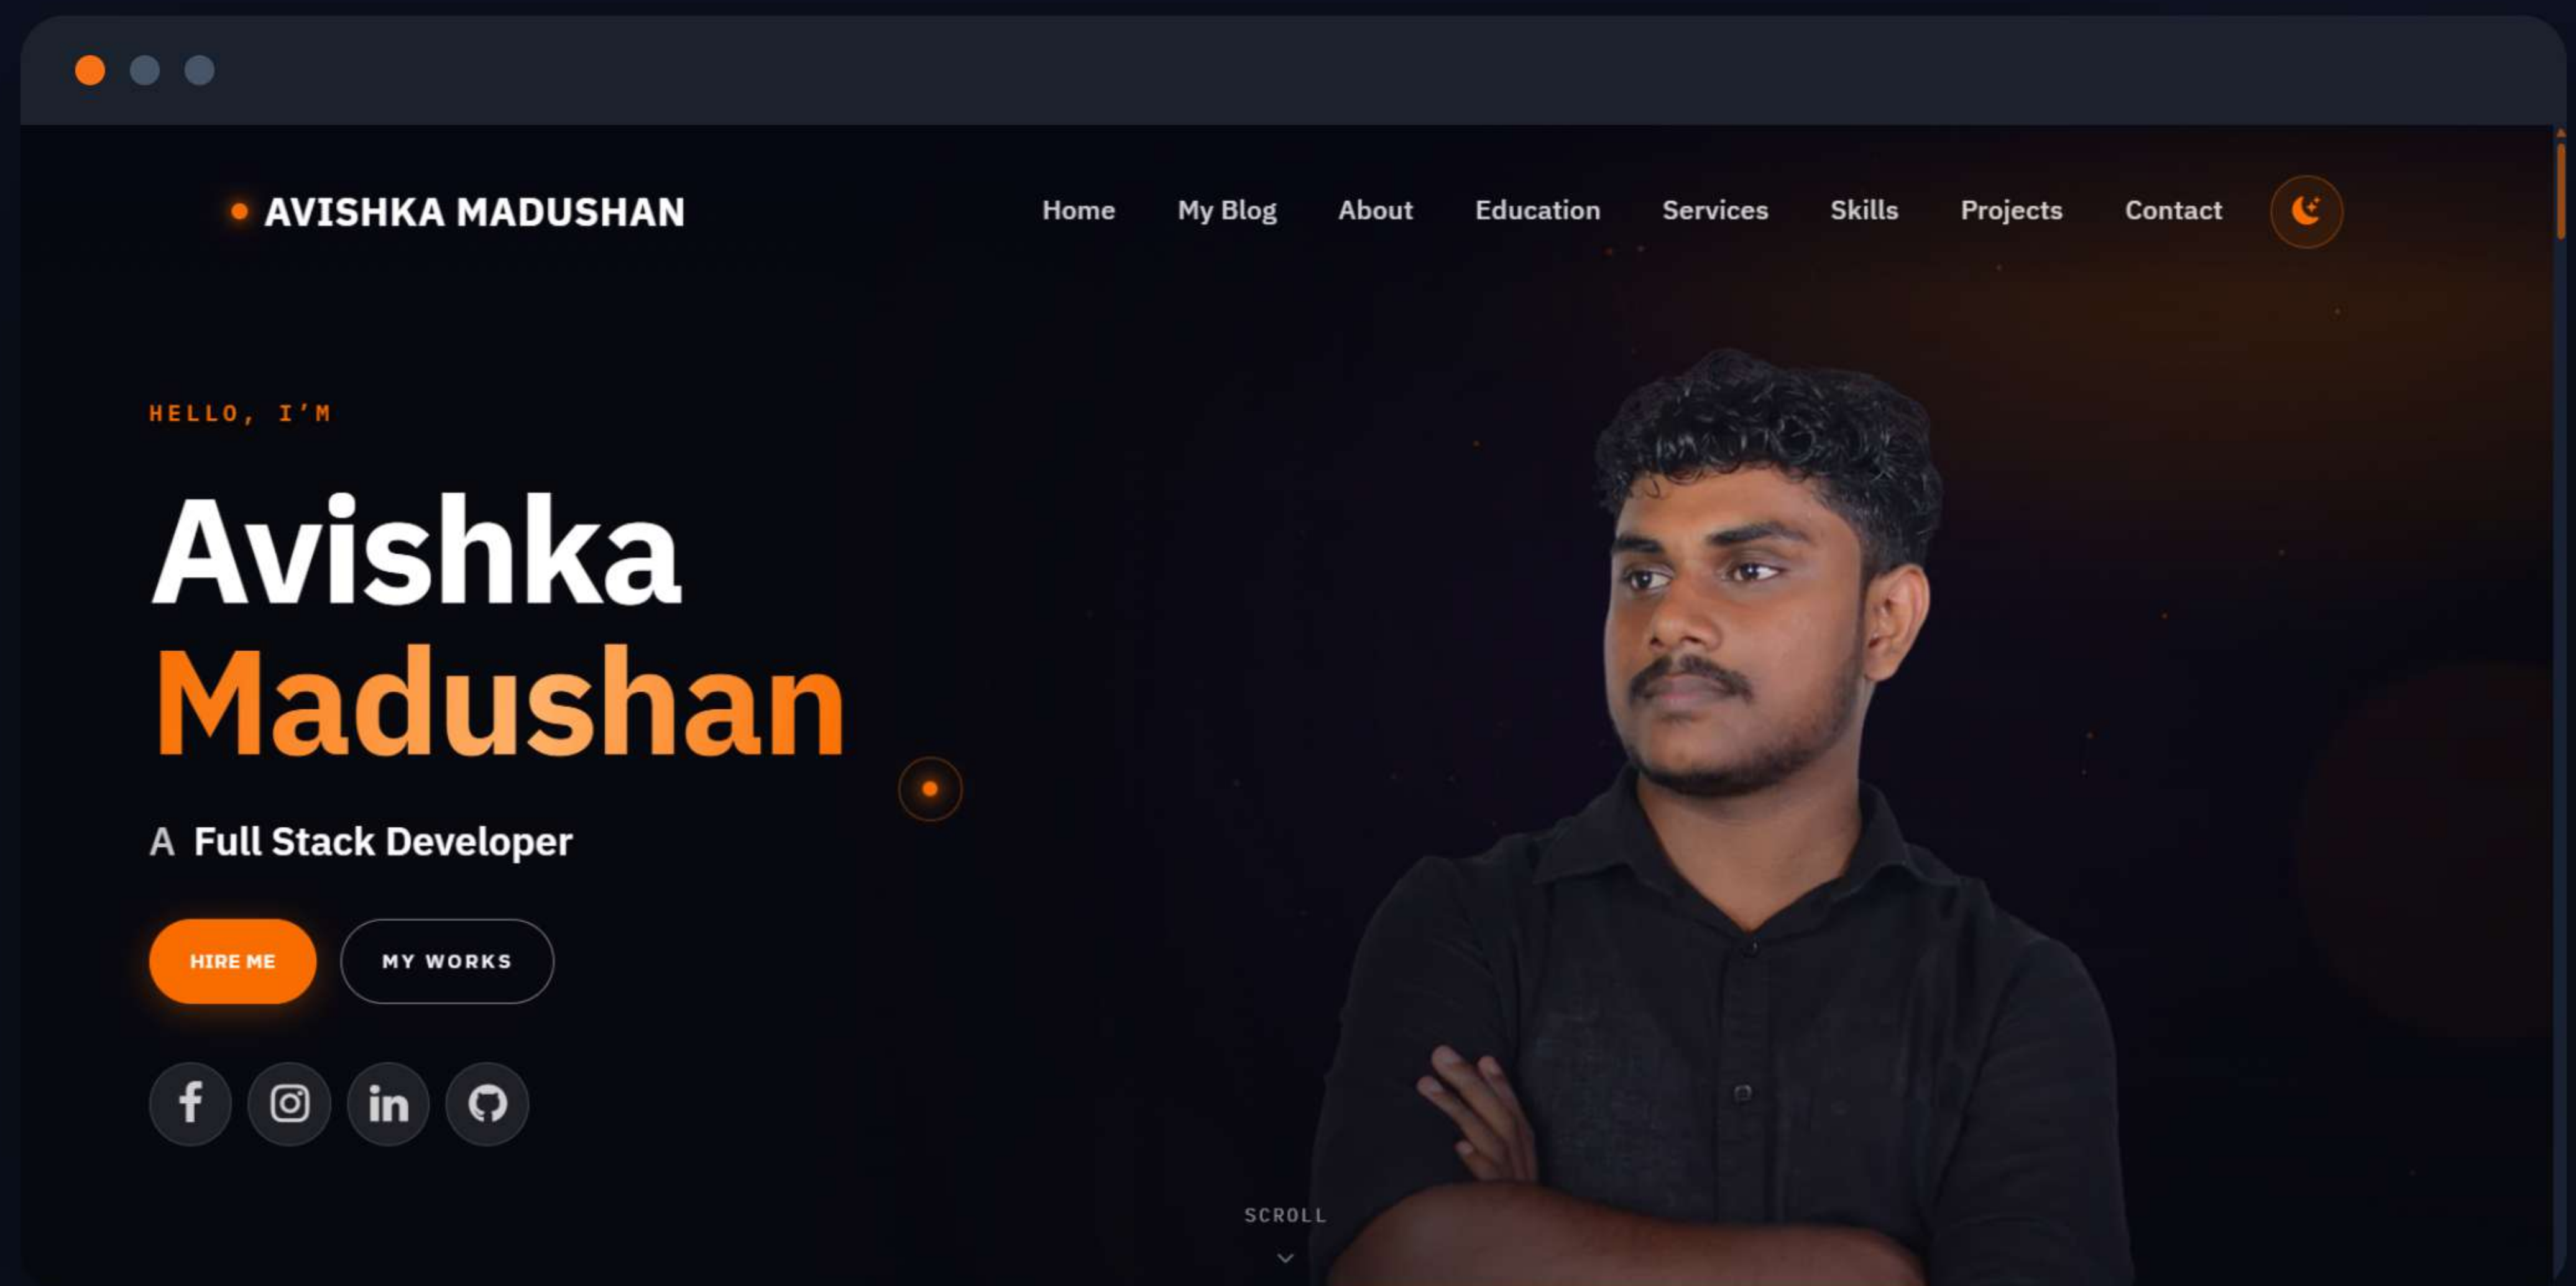

Drifting particles, a wordmark reveal and a real load-progress bar the whole intro runs in a single <canvas> with no library.

THE HERO

Split layout. Rotating role.

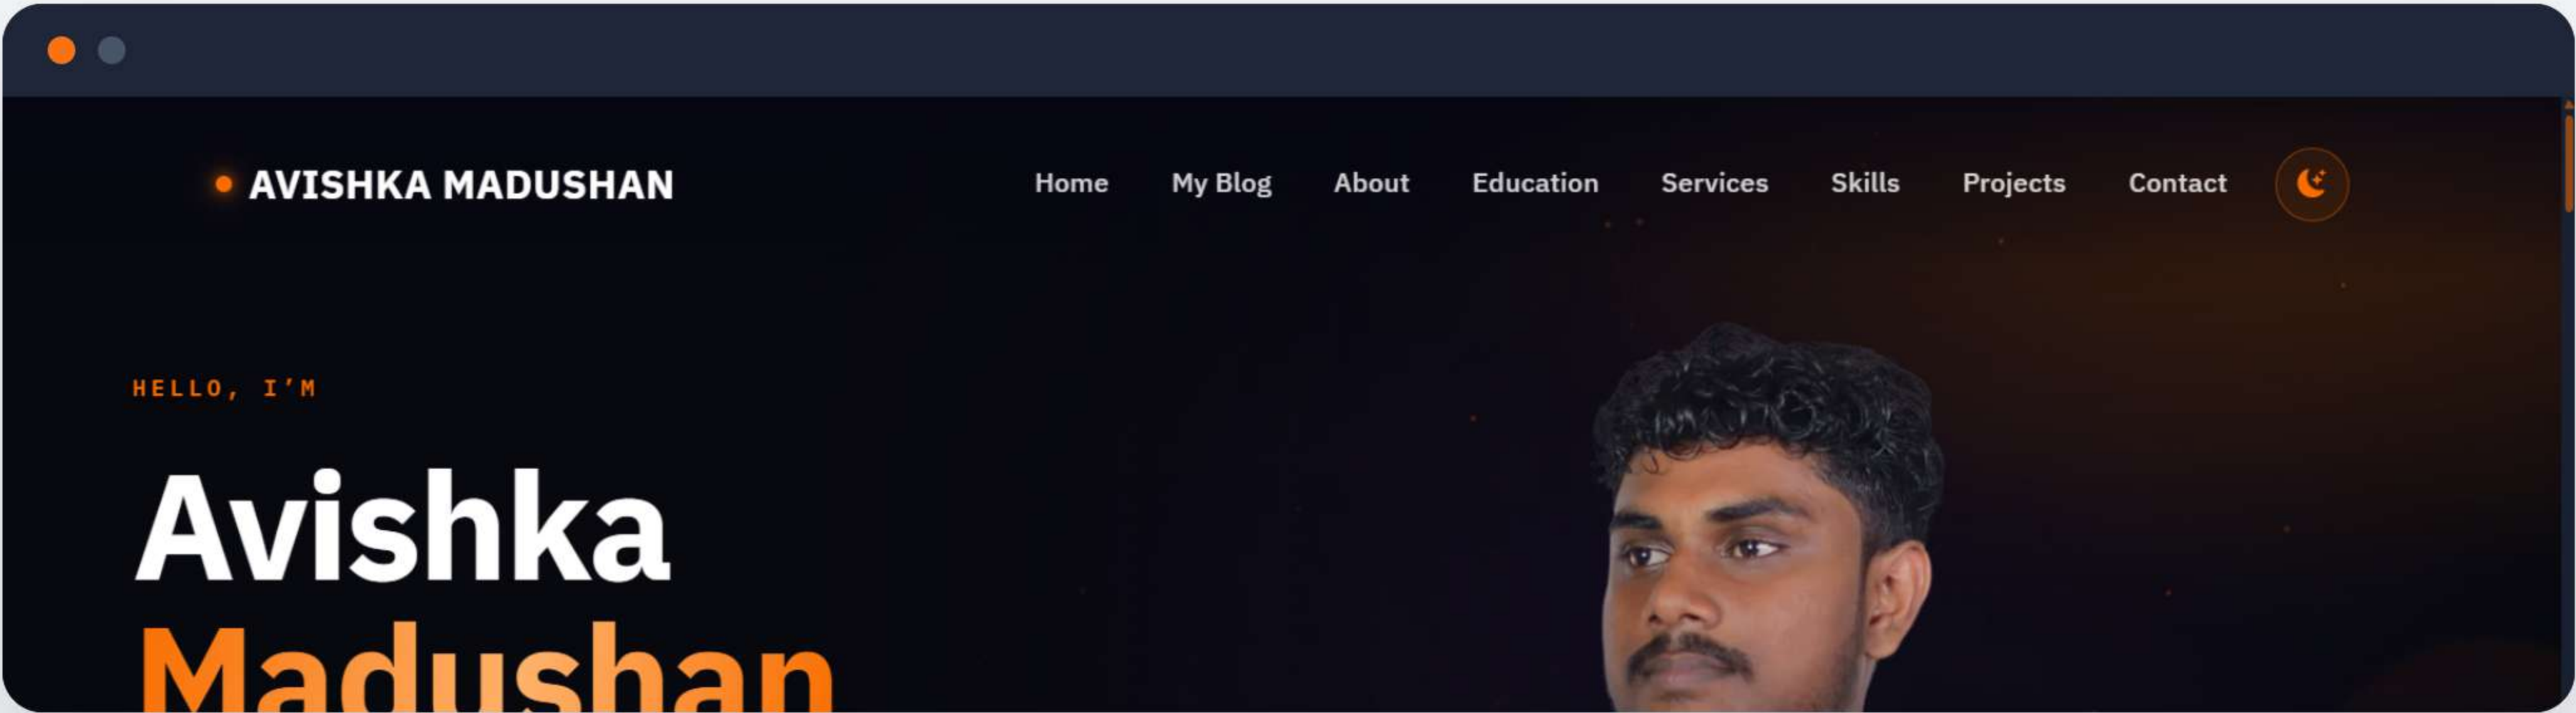

An animated mesh background, a typed role that cycles through what I do, and social links pinned within one thumb's reach on mobile.

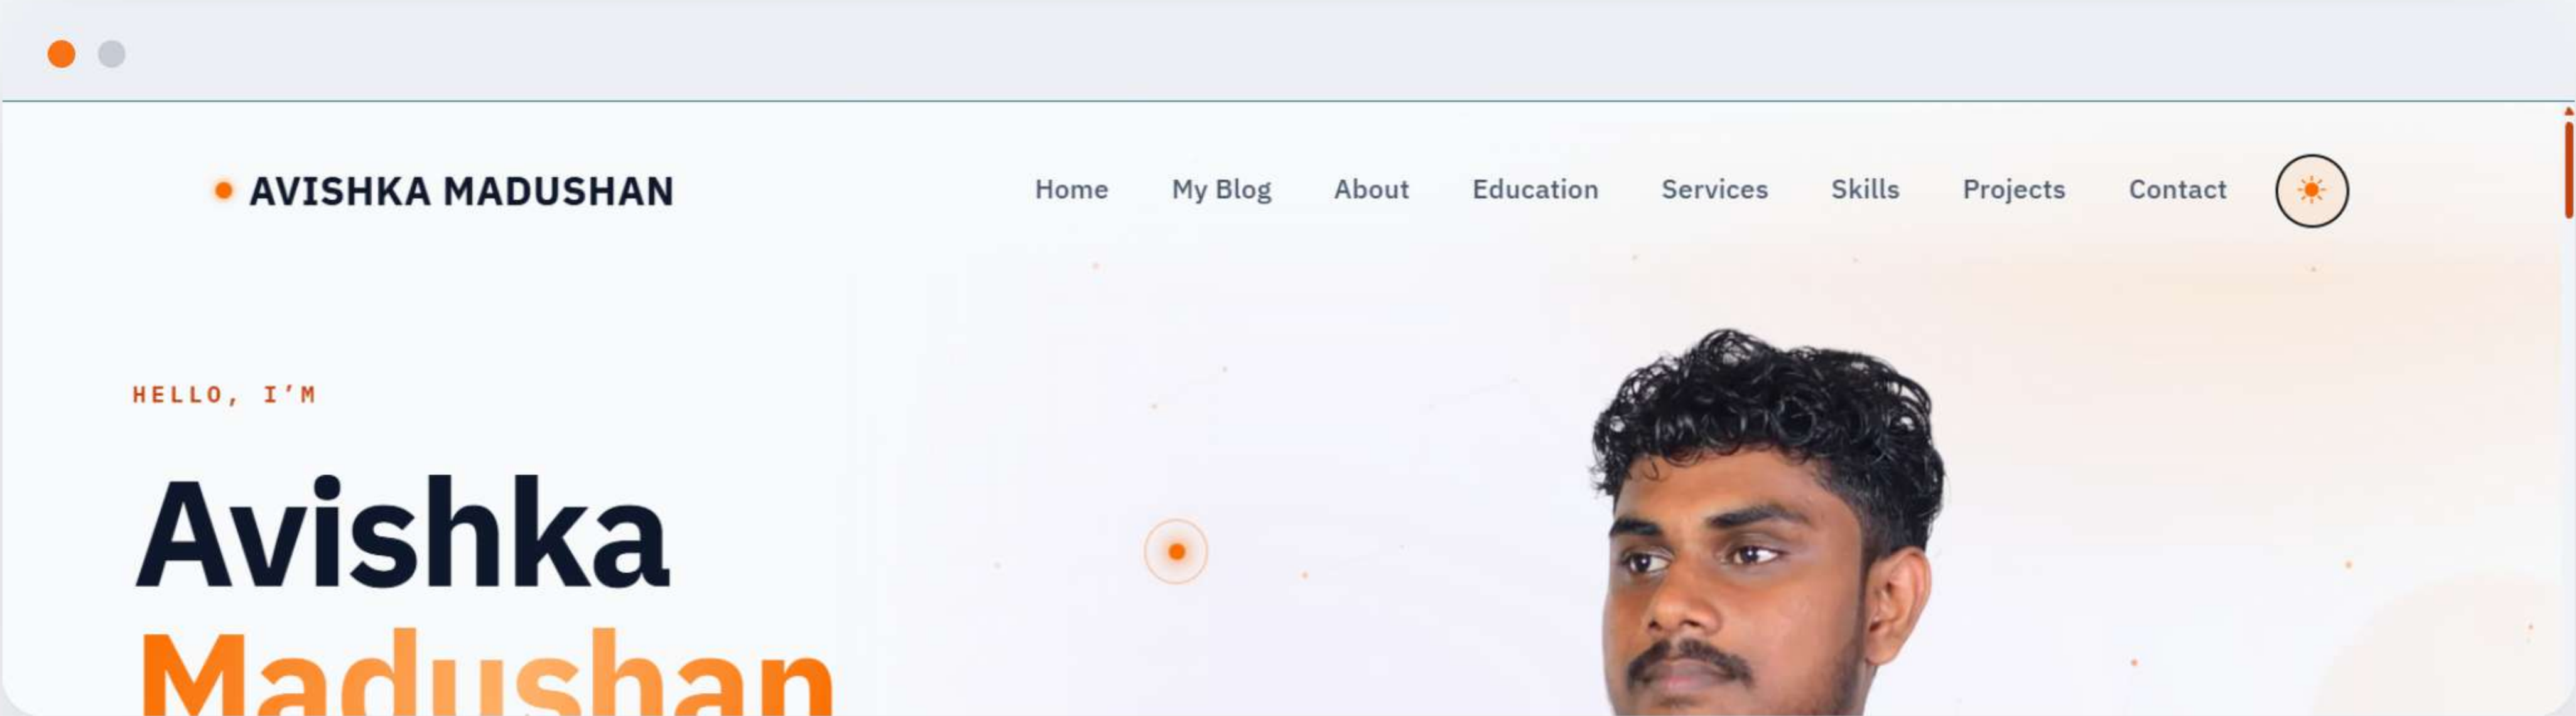

THEMING

One switch, two identities.

A full light and dark system, with the choice persisted in localStorage and a forced-colors override for Windows High Contrast.

dark · default

light · same markup

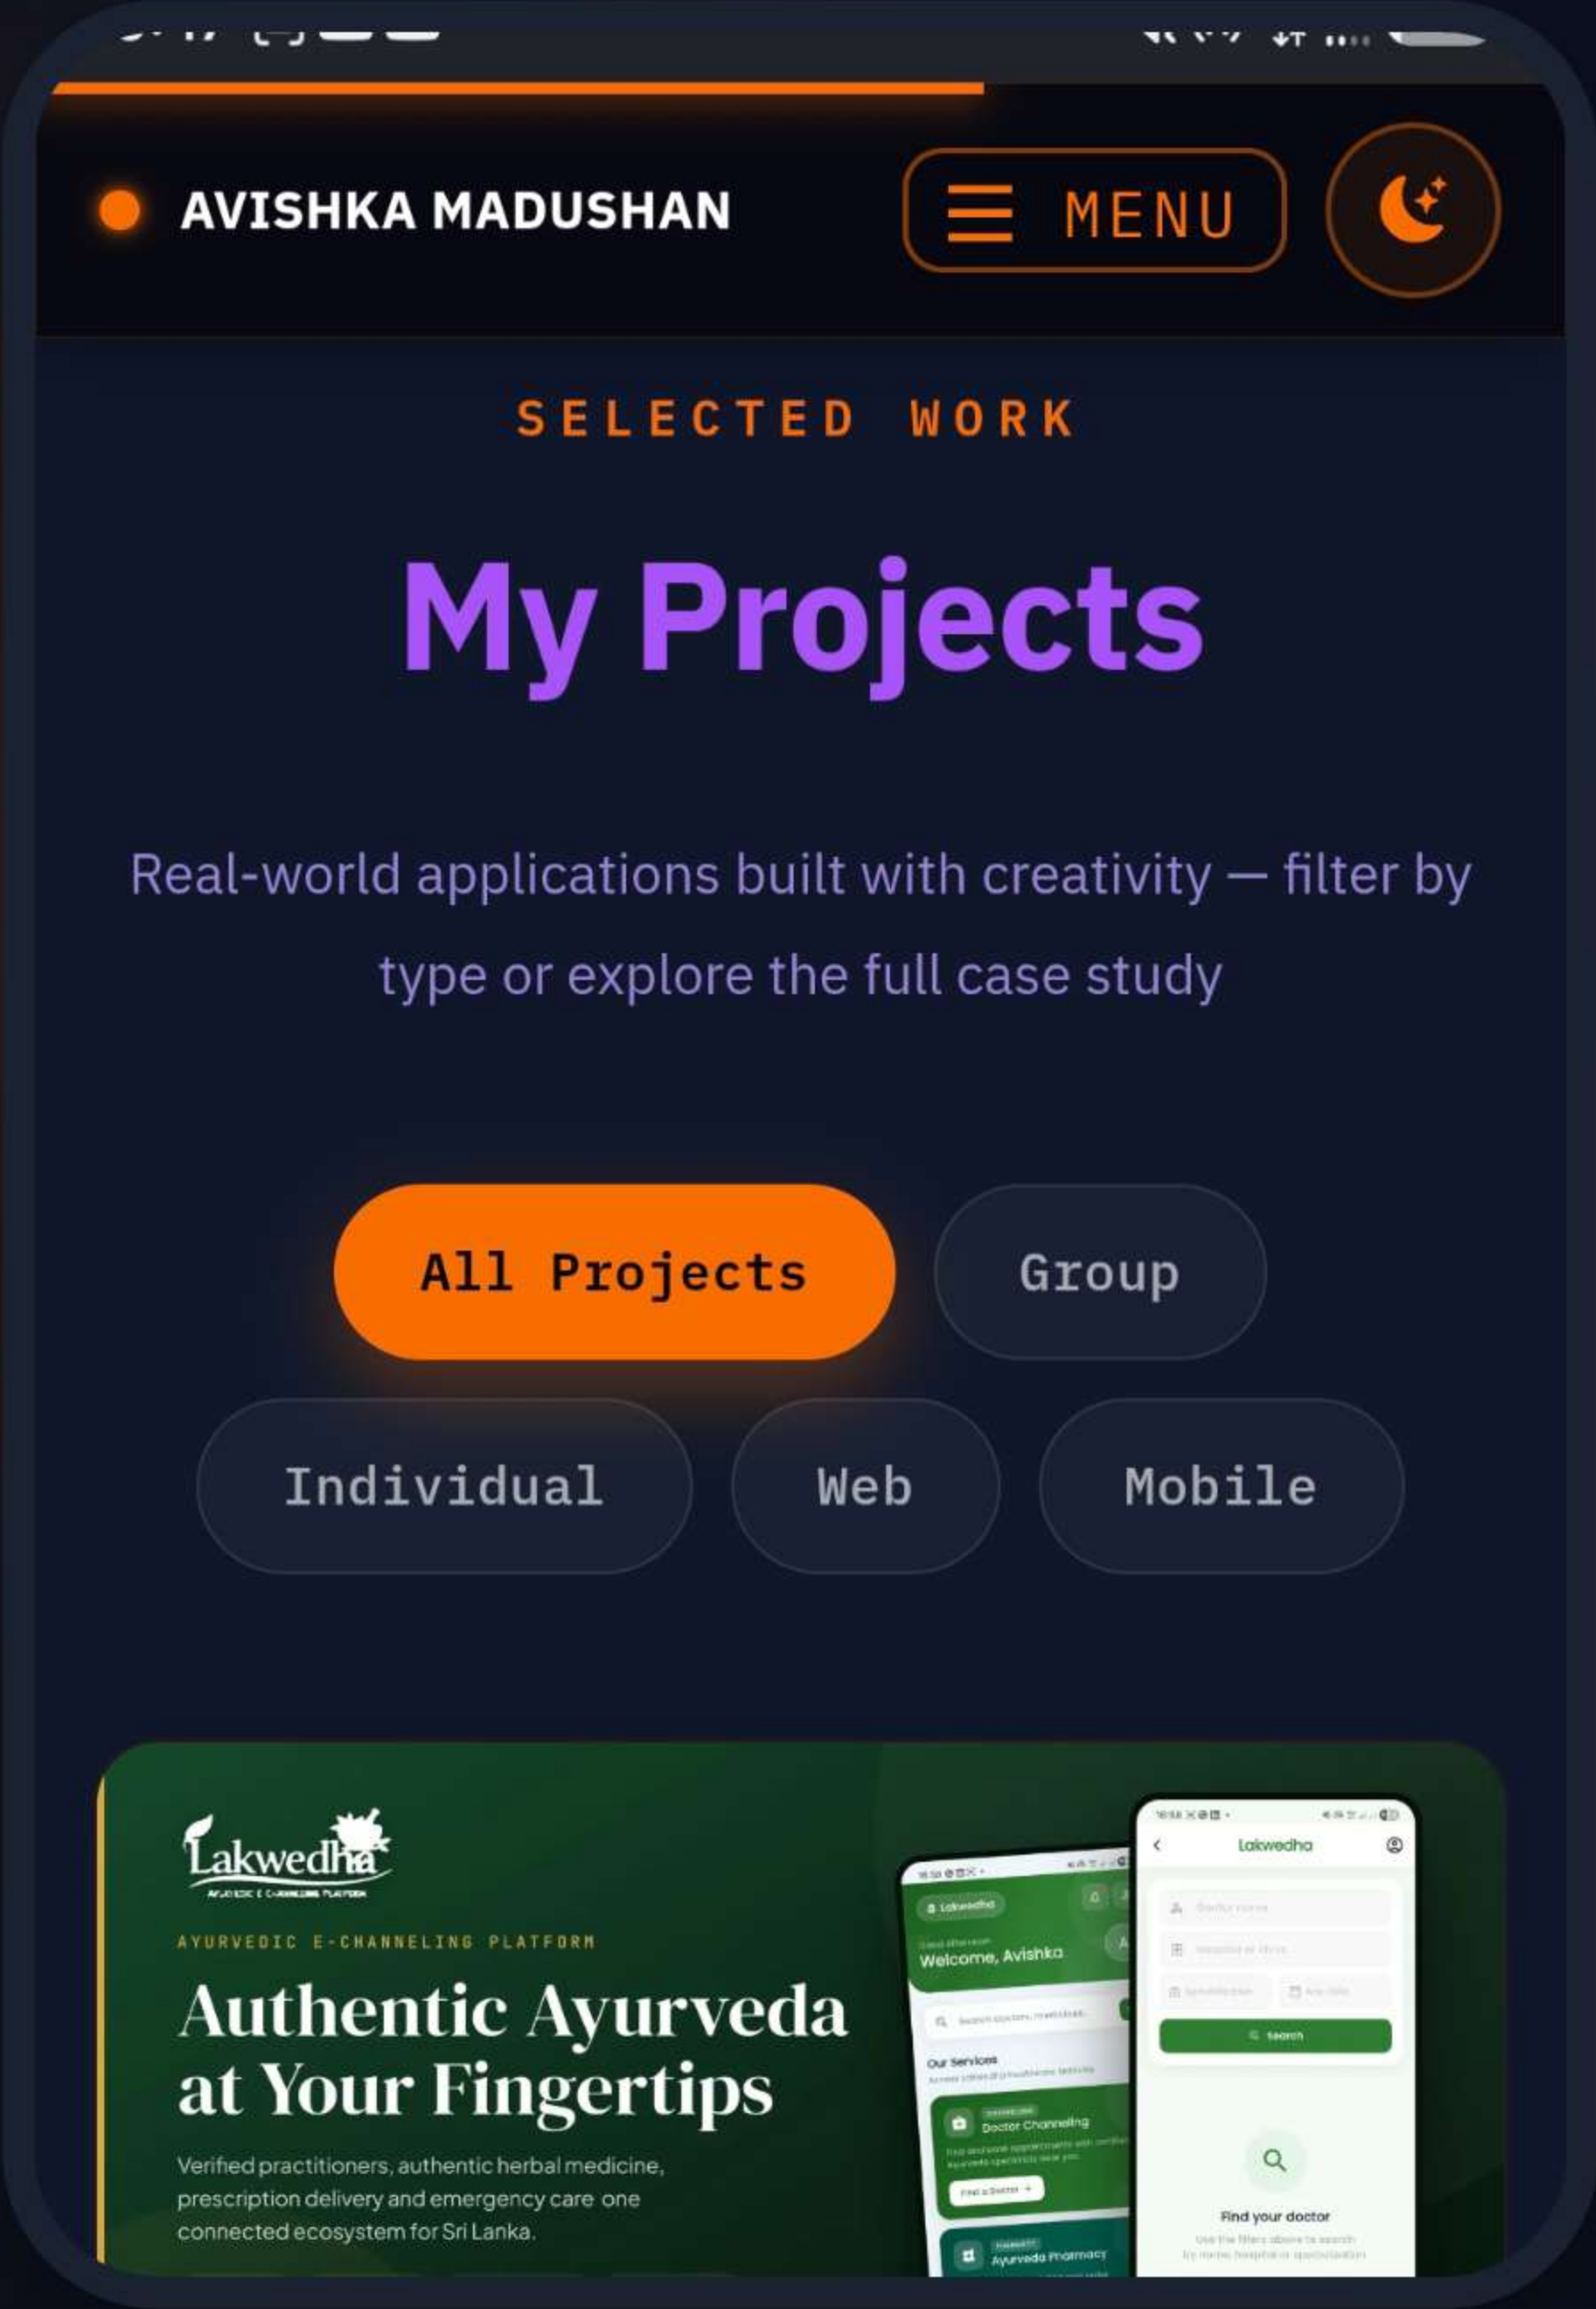

RESPONSIVE

Built mobile first, tested phone first.

Fluid grids and `clamp()` typography scale the same markup from a 360px handset to a widescreen desktop.

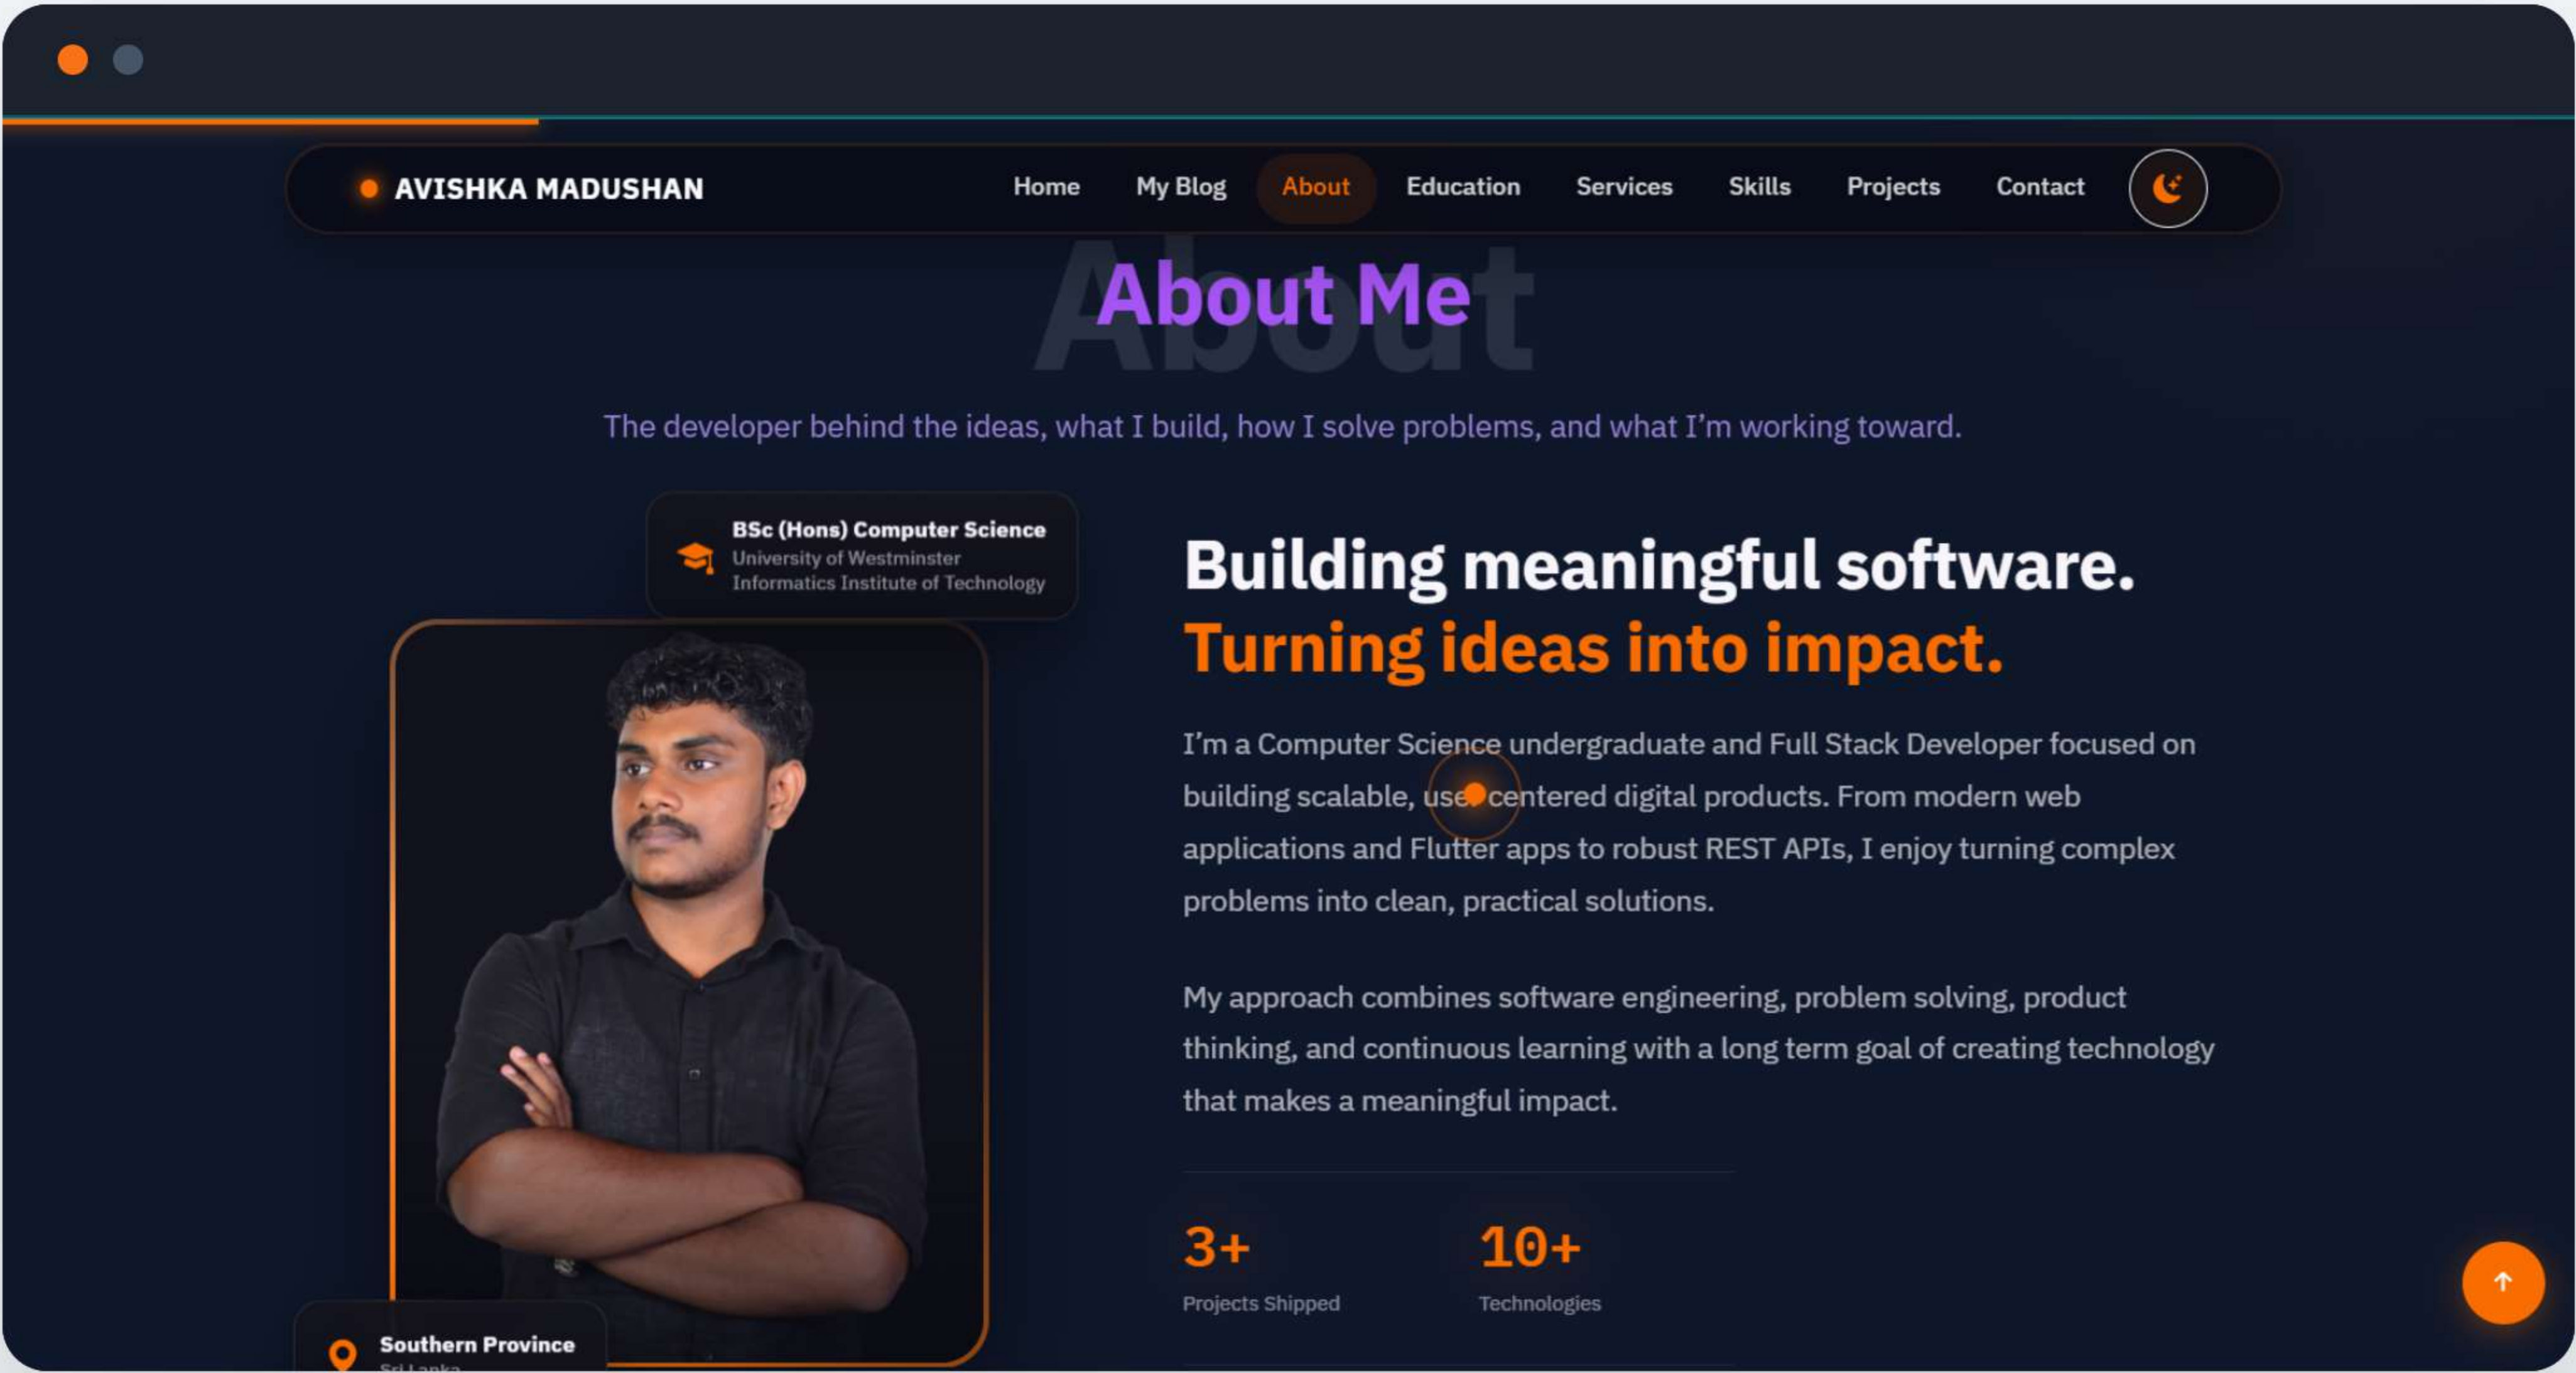

hero · 360px

projects · filters stack

The developer behind the ideas.

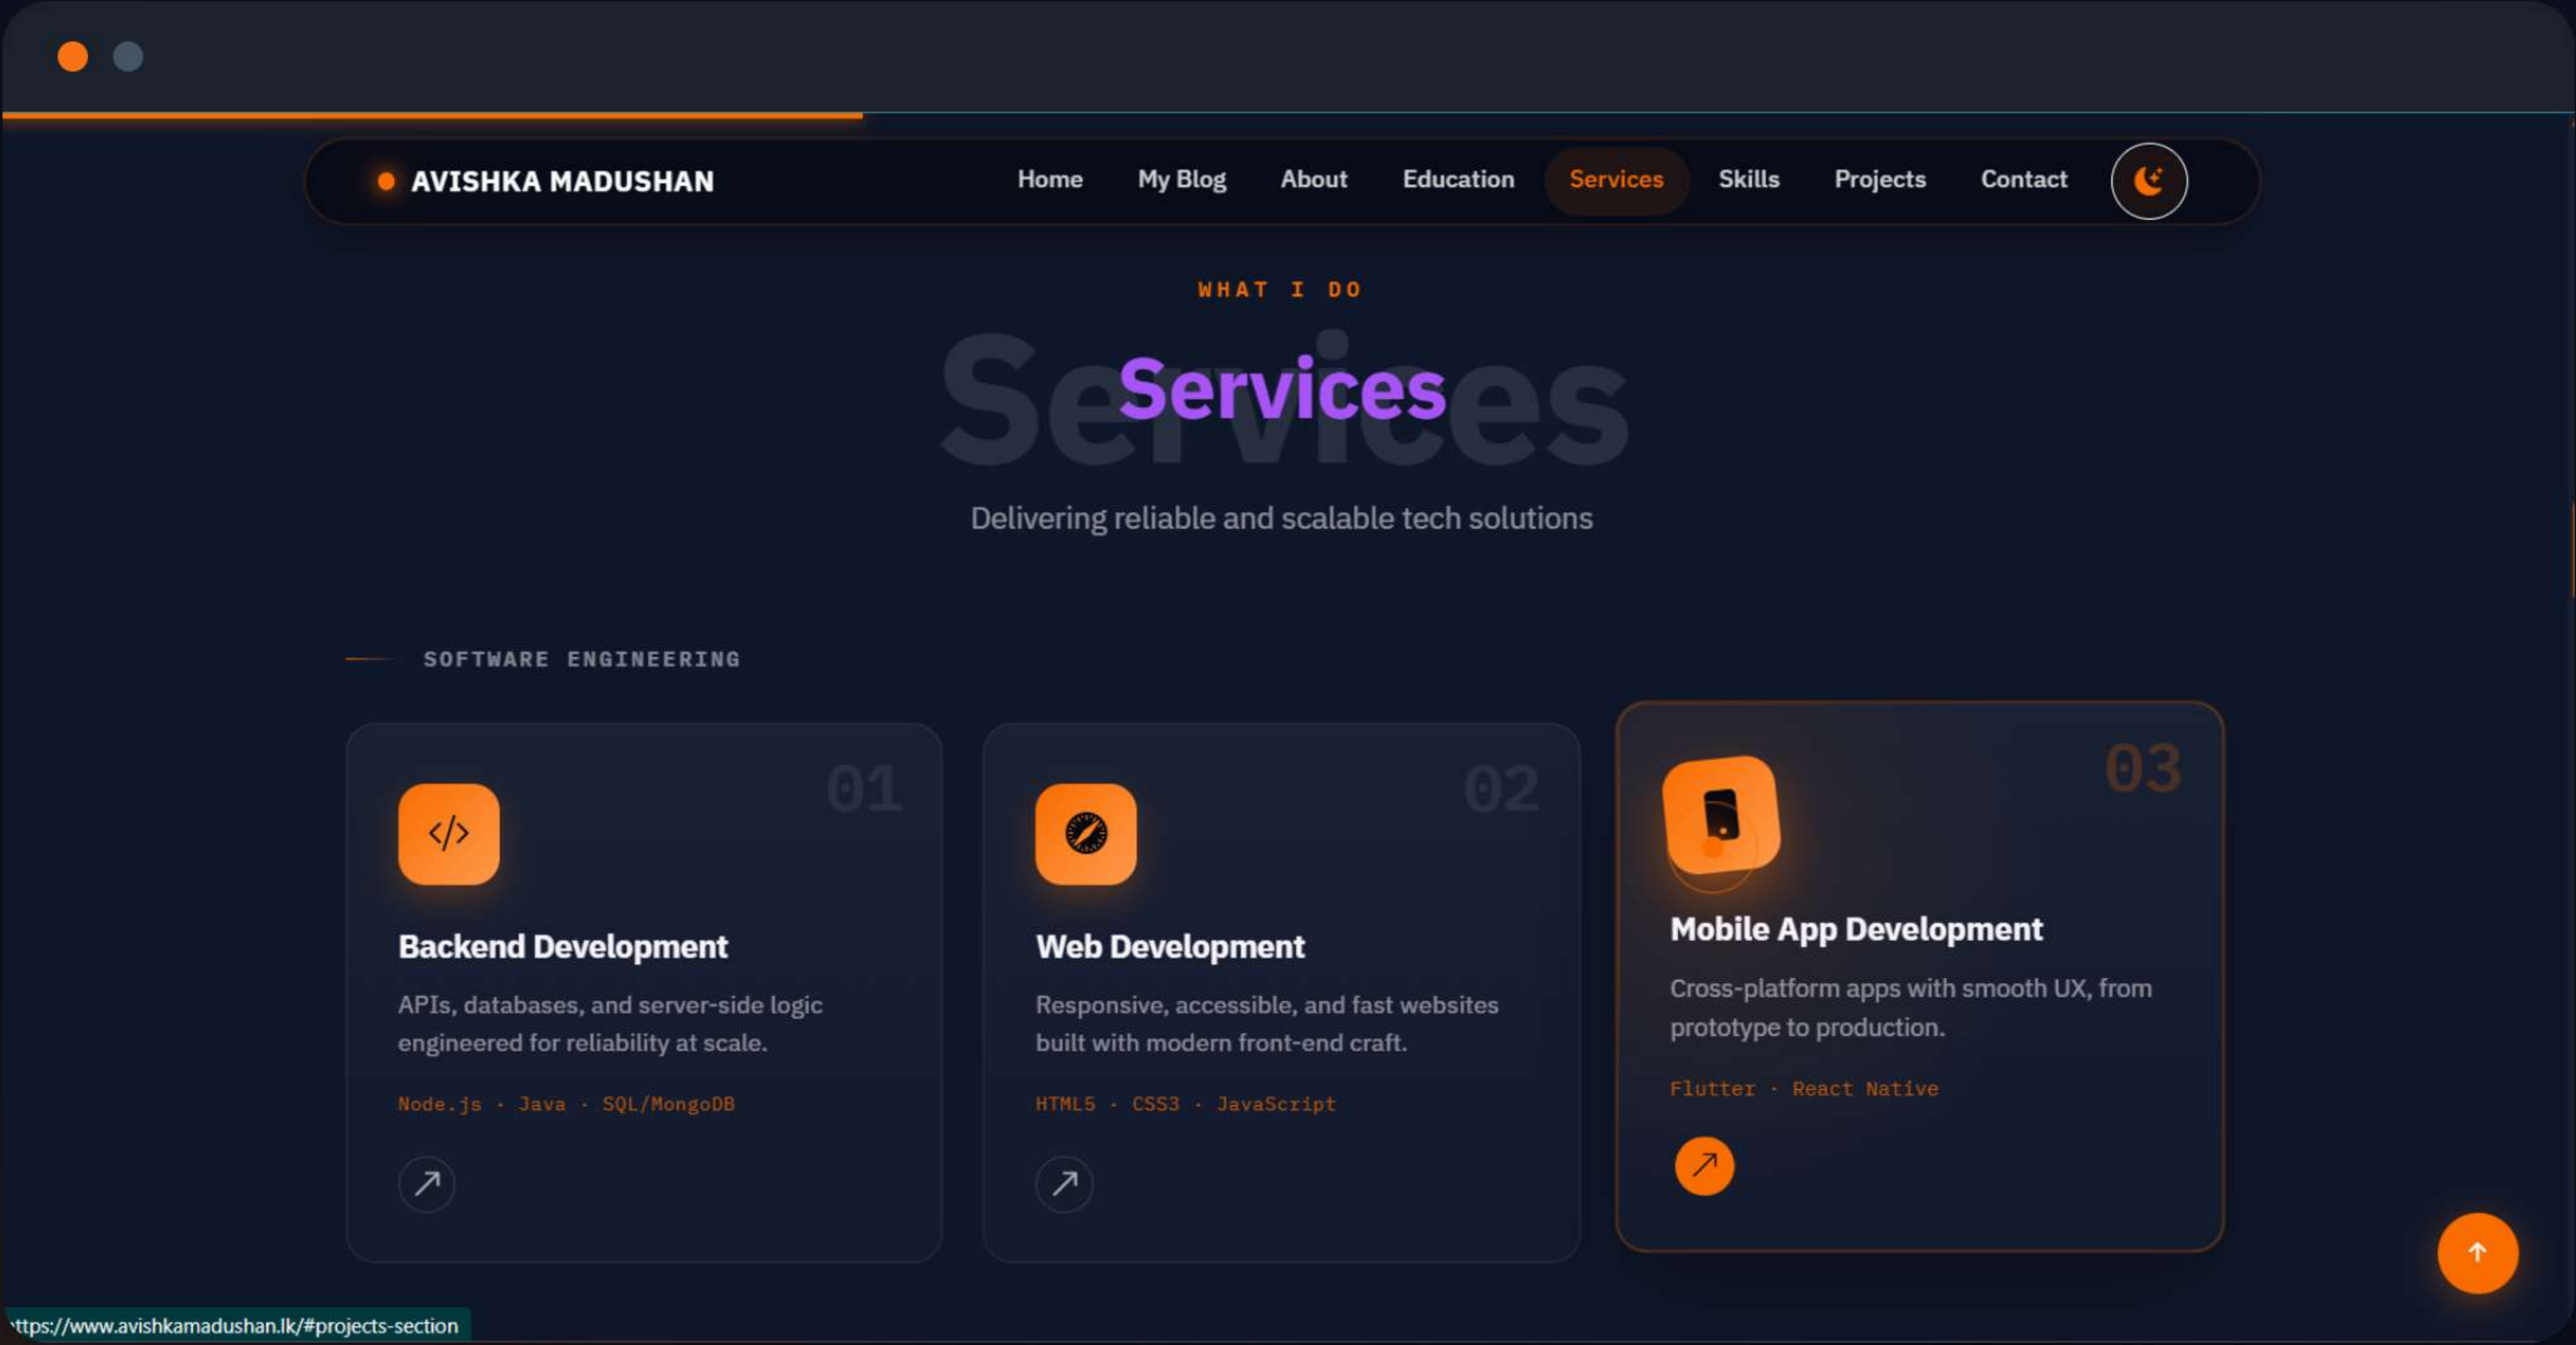

An editorial bento layout portrait, floating credential cards and stat counters that animate as the section scrolls into view.

WHAT I DO

Six service tracks, numbered and clear.

Backend, web, mobile and more each card names the stack it's delivered in, so a recruiter can scan capability in seconds.

TECH STACK

No framework. No build step.

Projects, blog posts and skills all render from JS data objects, so the grid, filters and modals stay in sync from a single source of truth.

MARKUP & STYLING

HTML5

CSS3

Bootstrap

Glassmorphism

clamp() type

SCRIPTS & MOTION

Vanilla JS

jQuery

AOS

Animate.css

Owl Carousel

TYPE & ICONS

IBM Plex Sans

IBM Plex Mono

Bootstrap Icons

Ionicons

DELIVERY

GitHub Pages

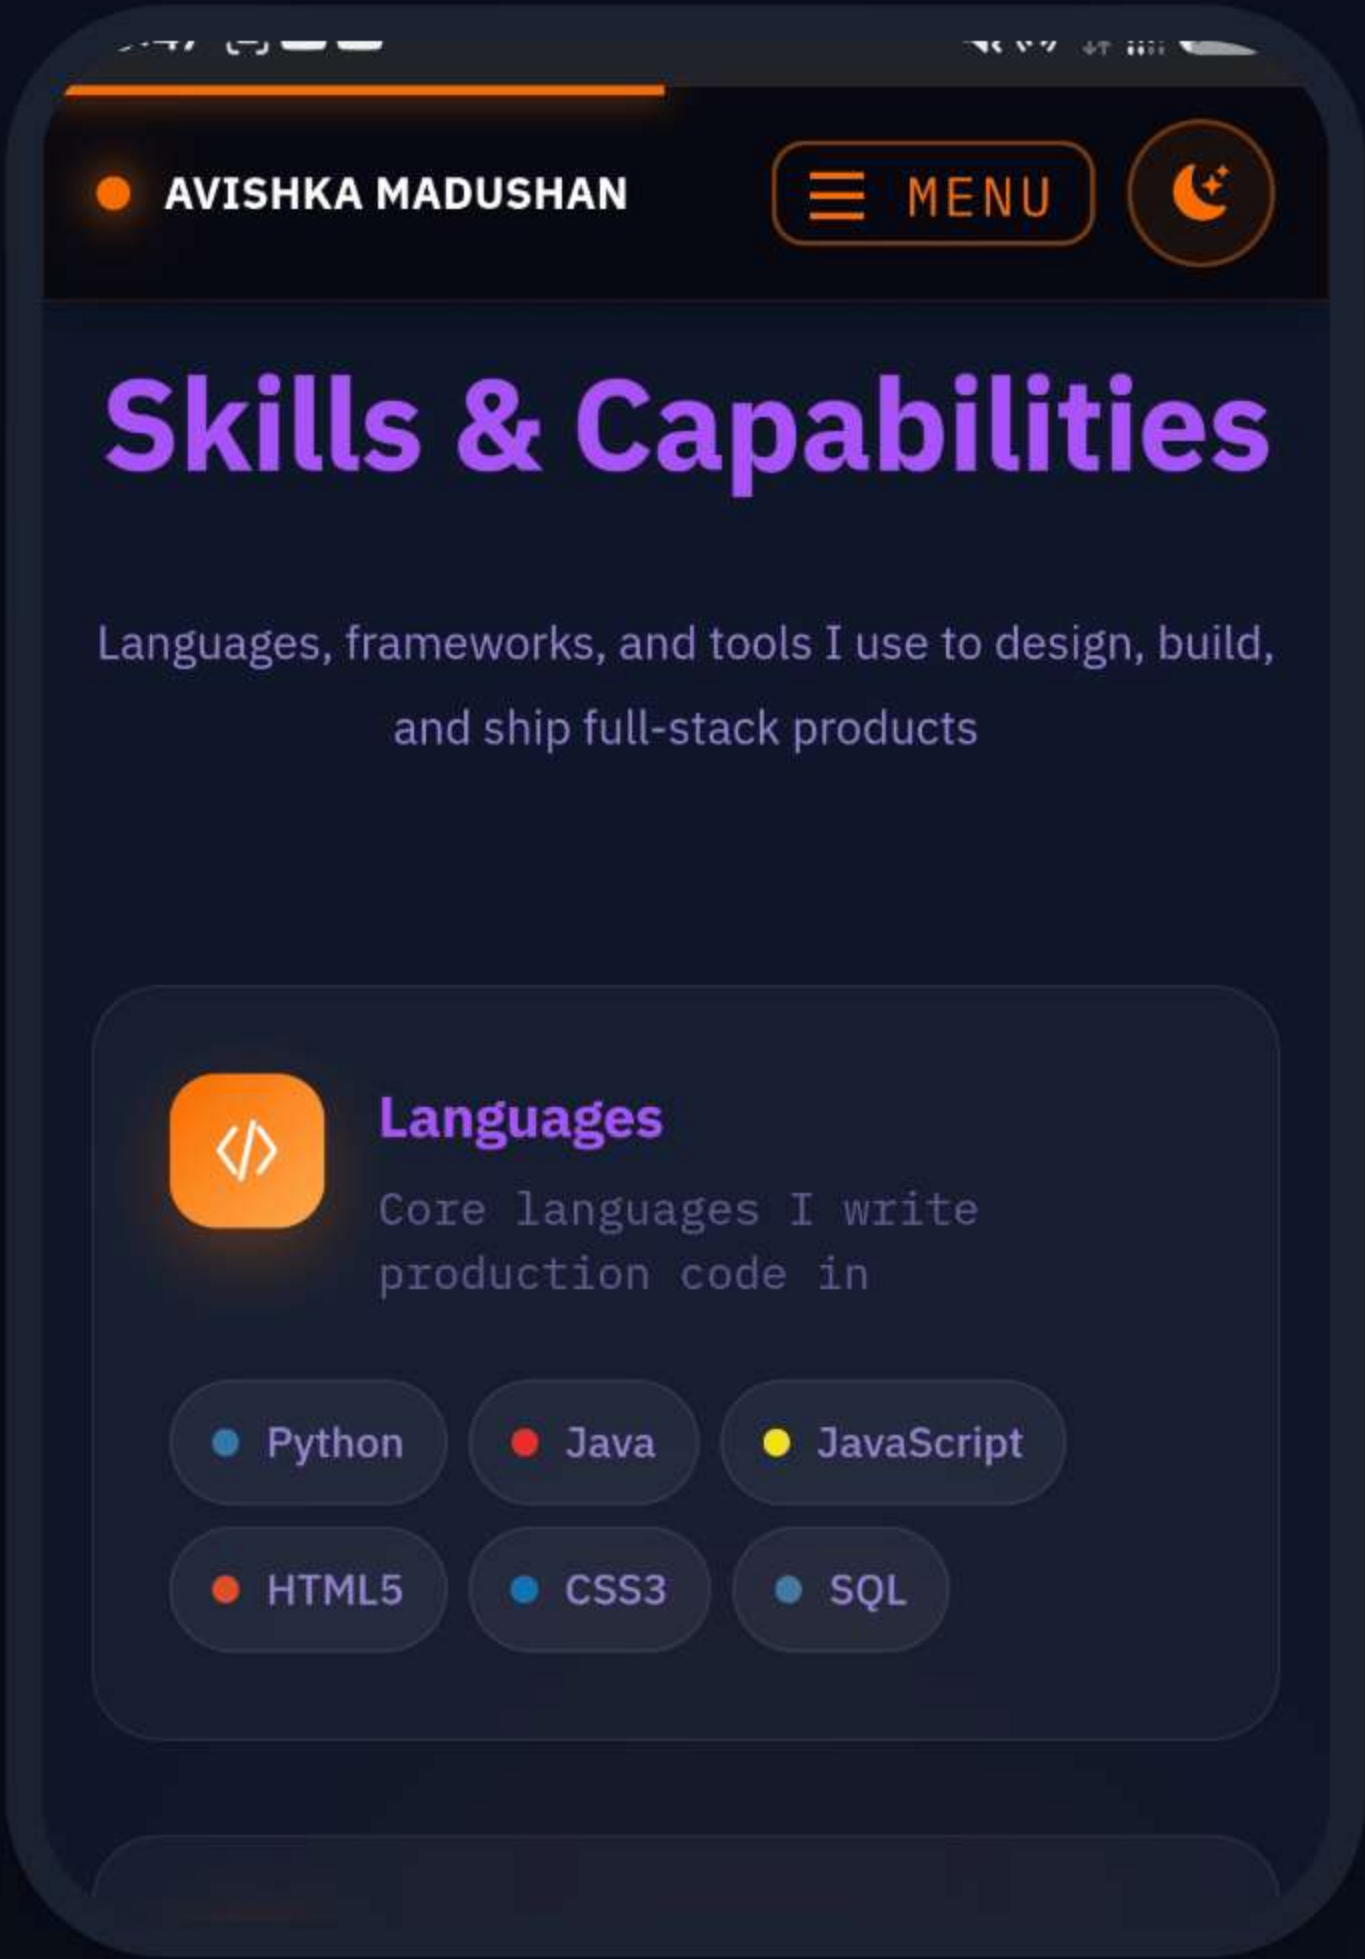

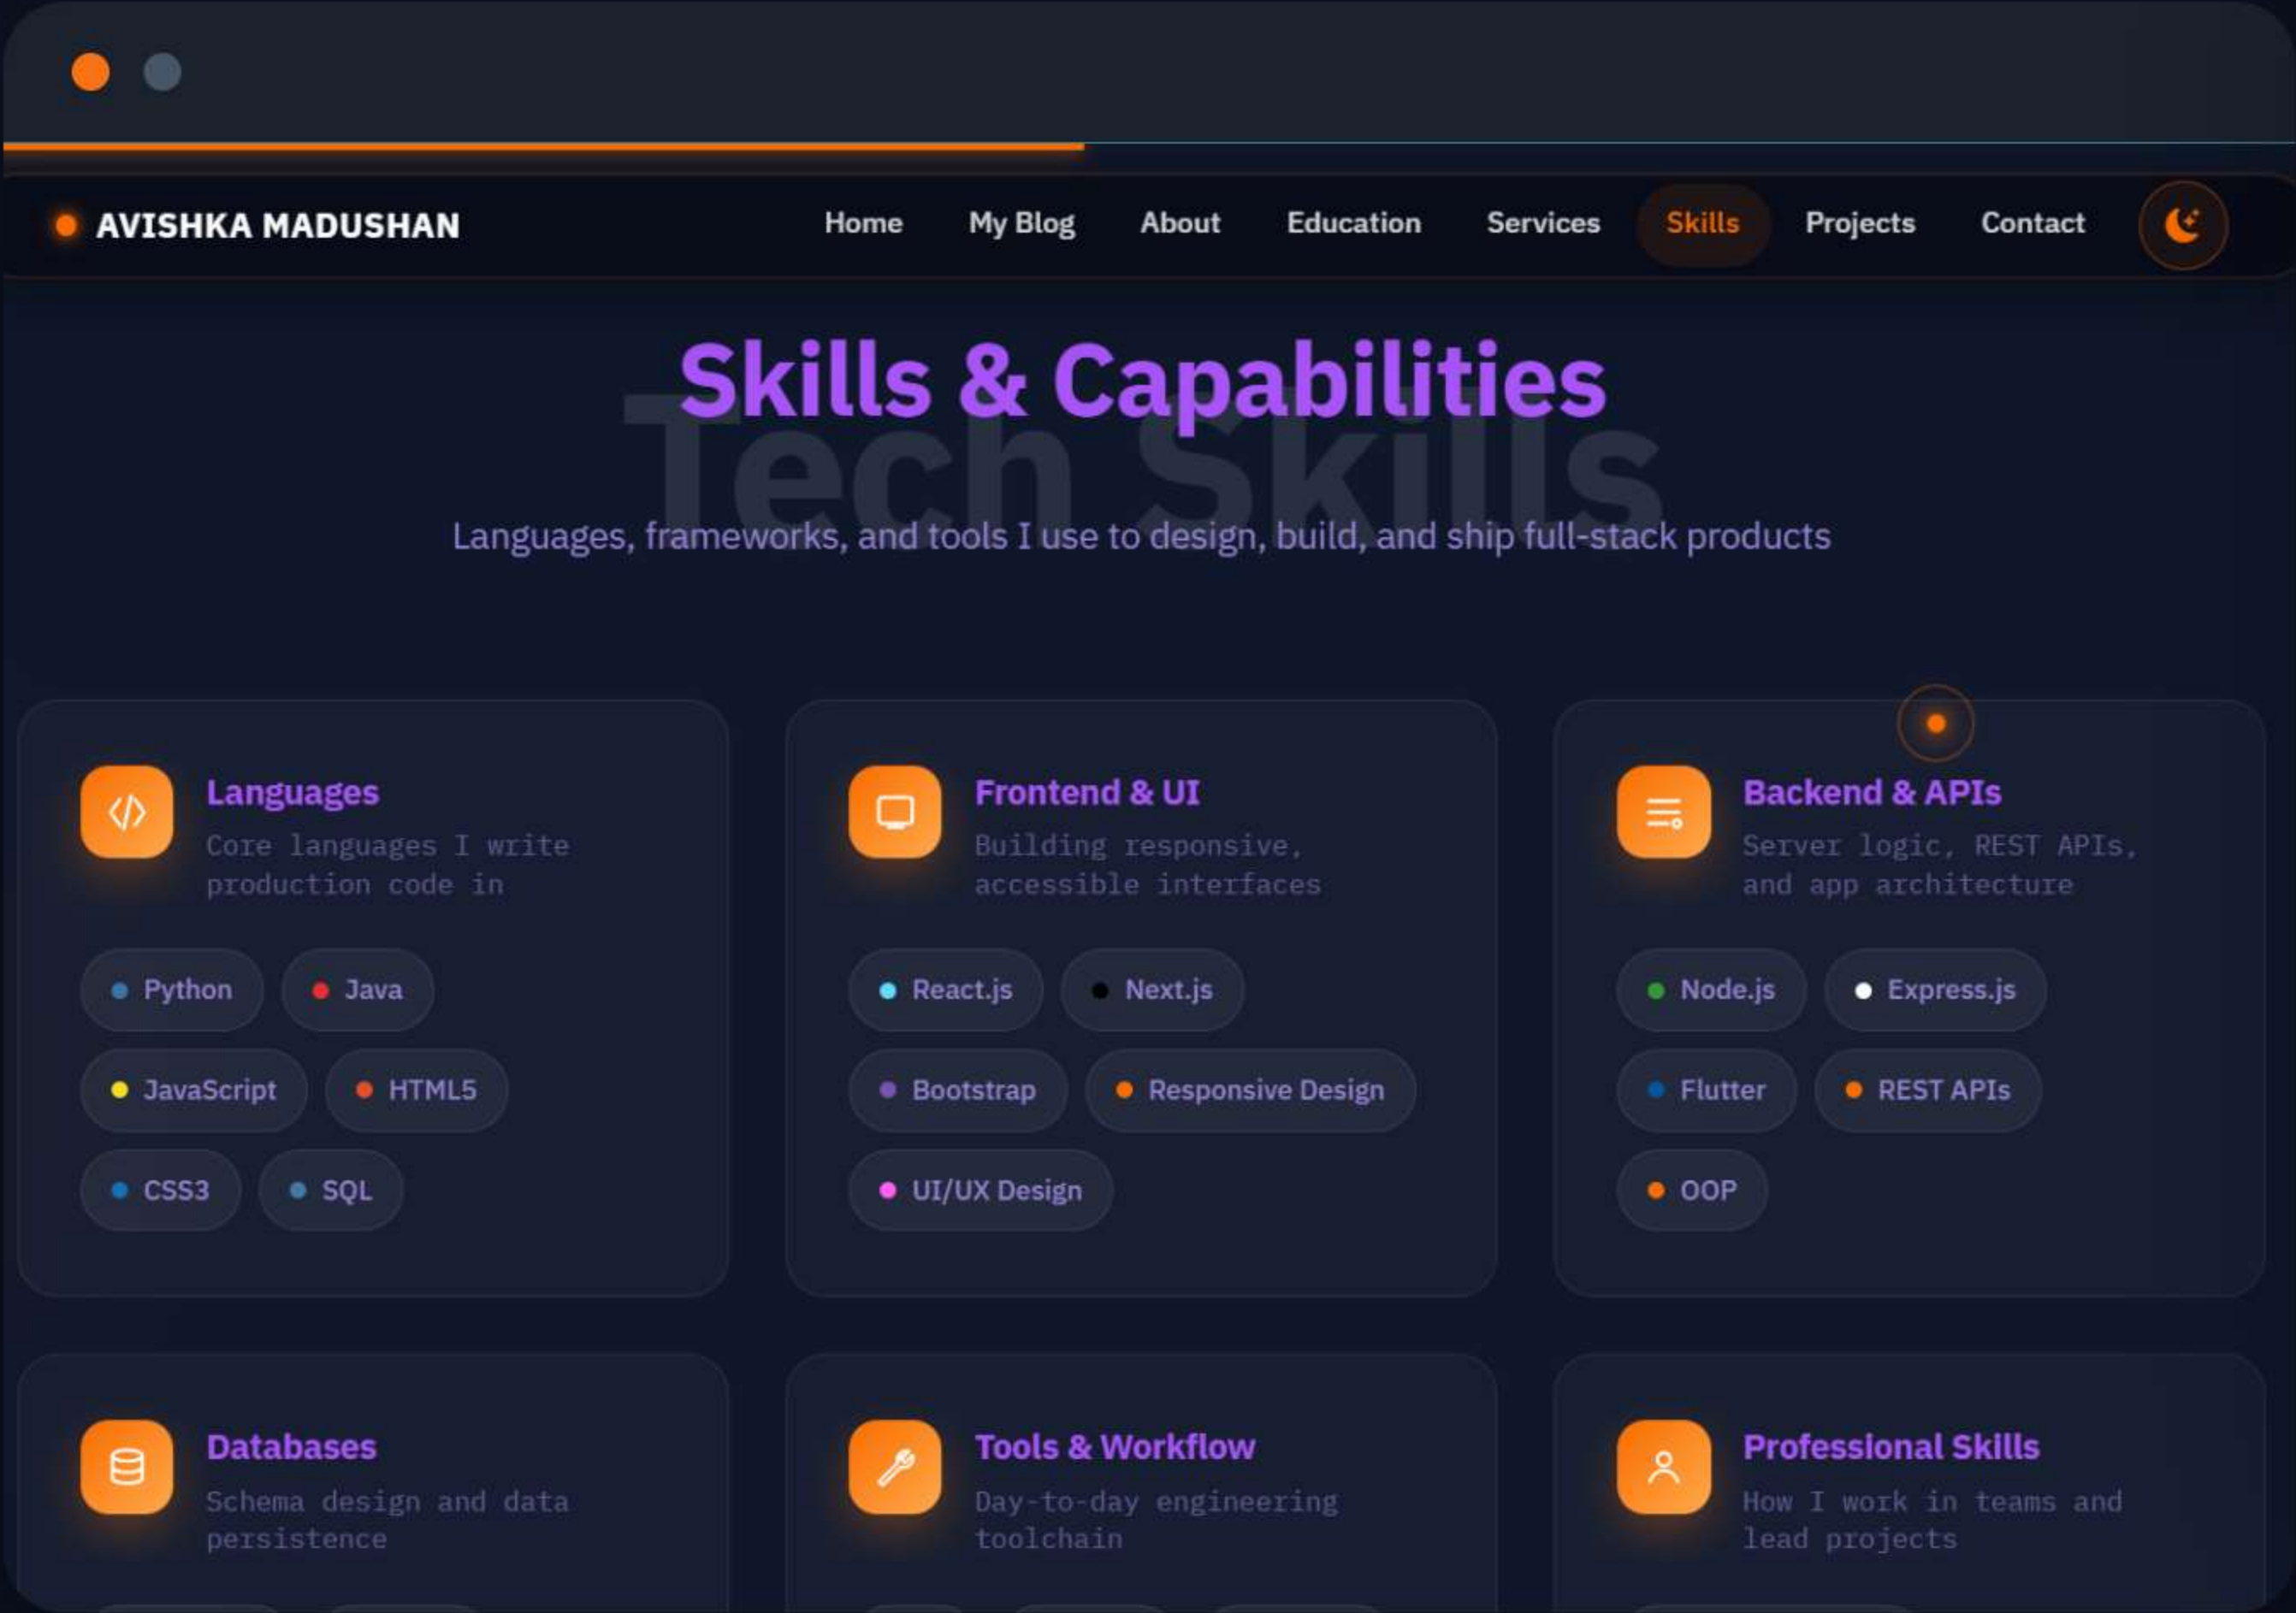

Custom domain

Static · zero build

SKILLS

Grouped, not dumped in a list.

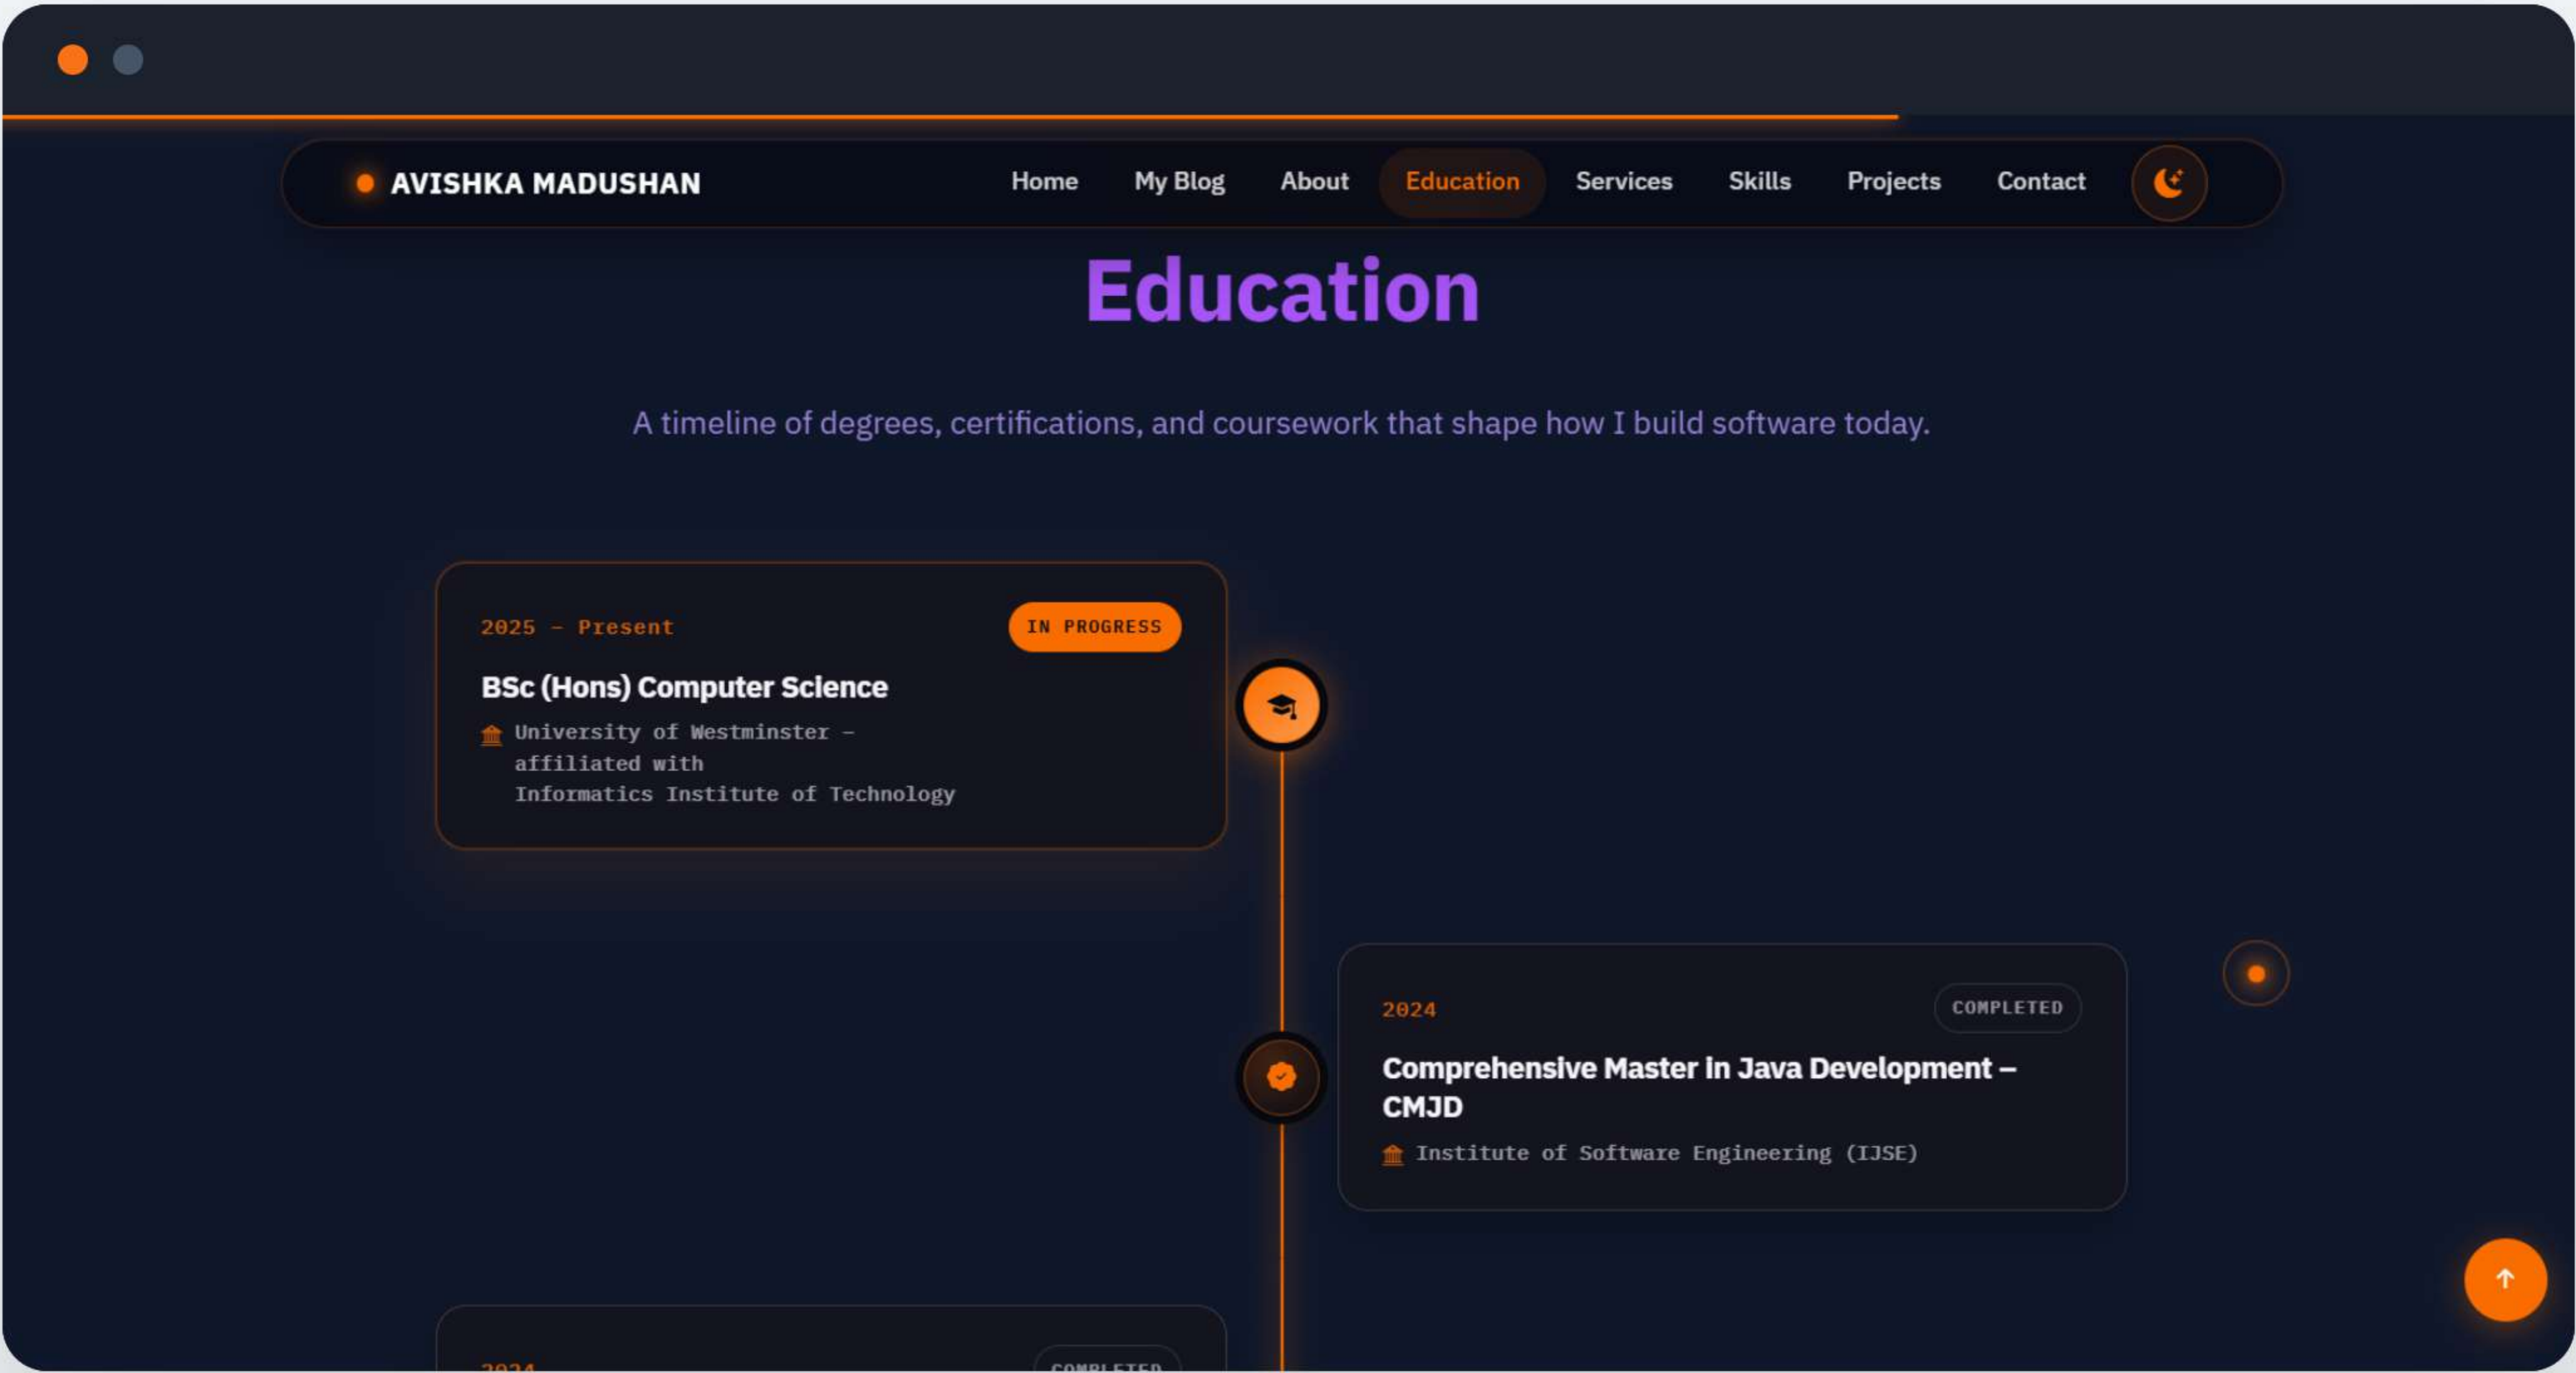

Six categories languages, frontend, backend, databases, tools and professional skills each chip colour coded to its ecosystem.

mobile

A timeline, not a bullet list.

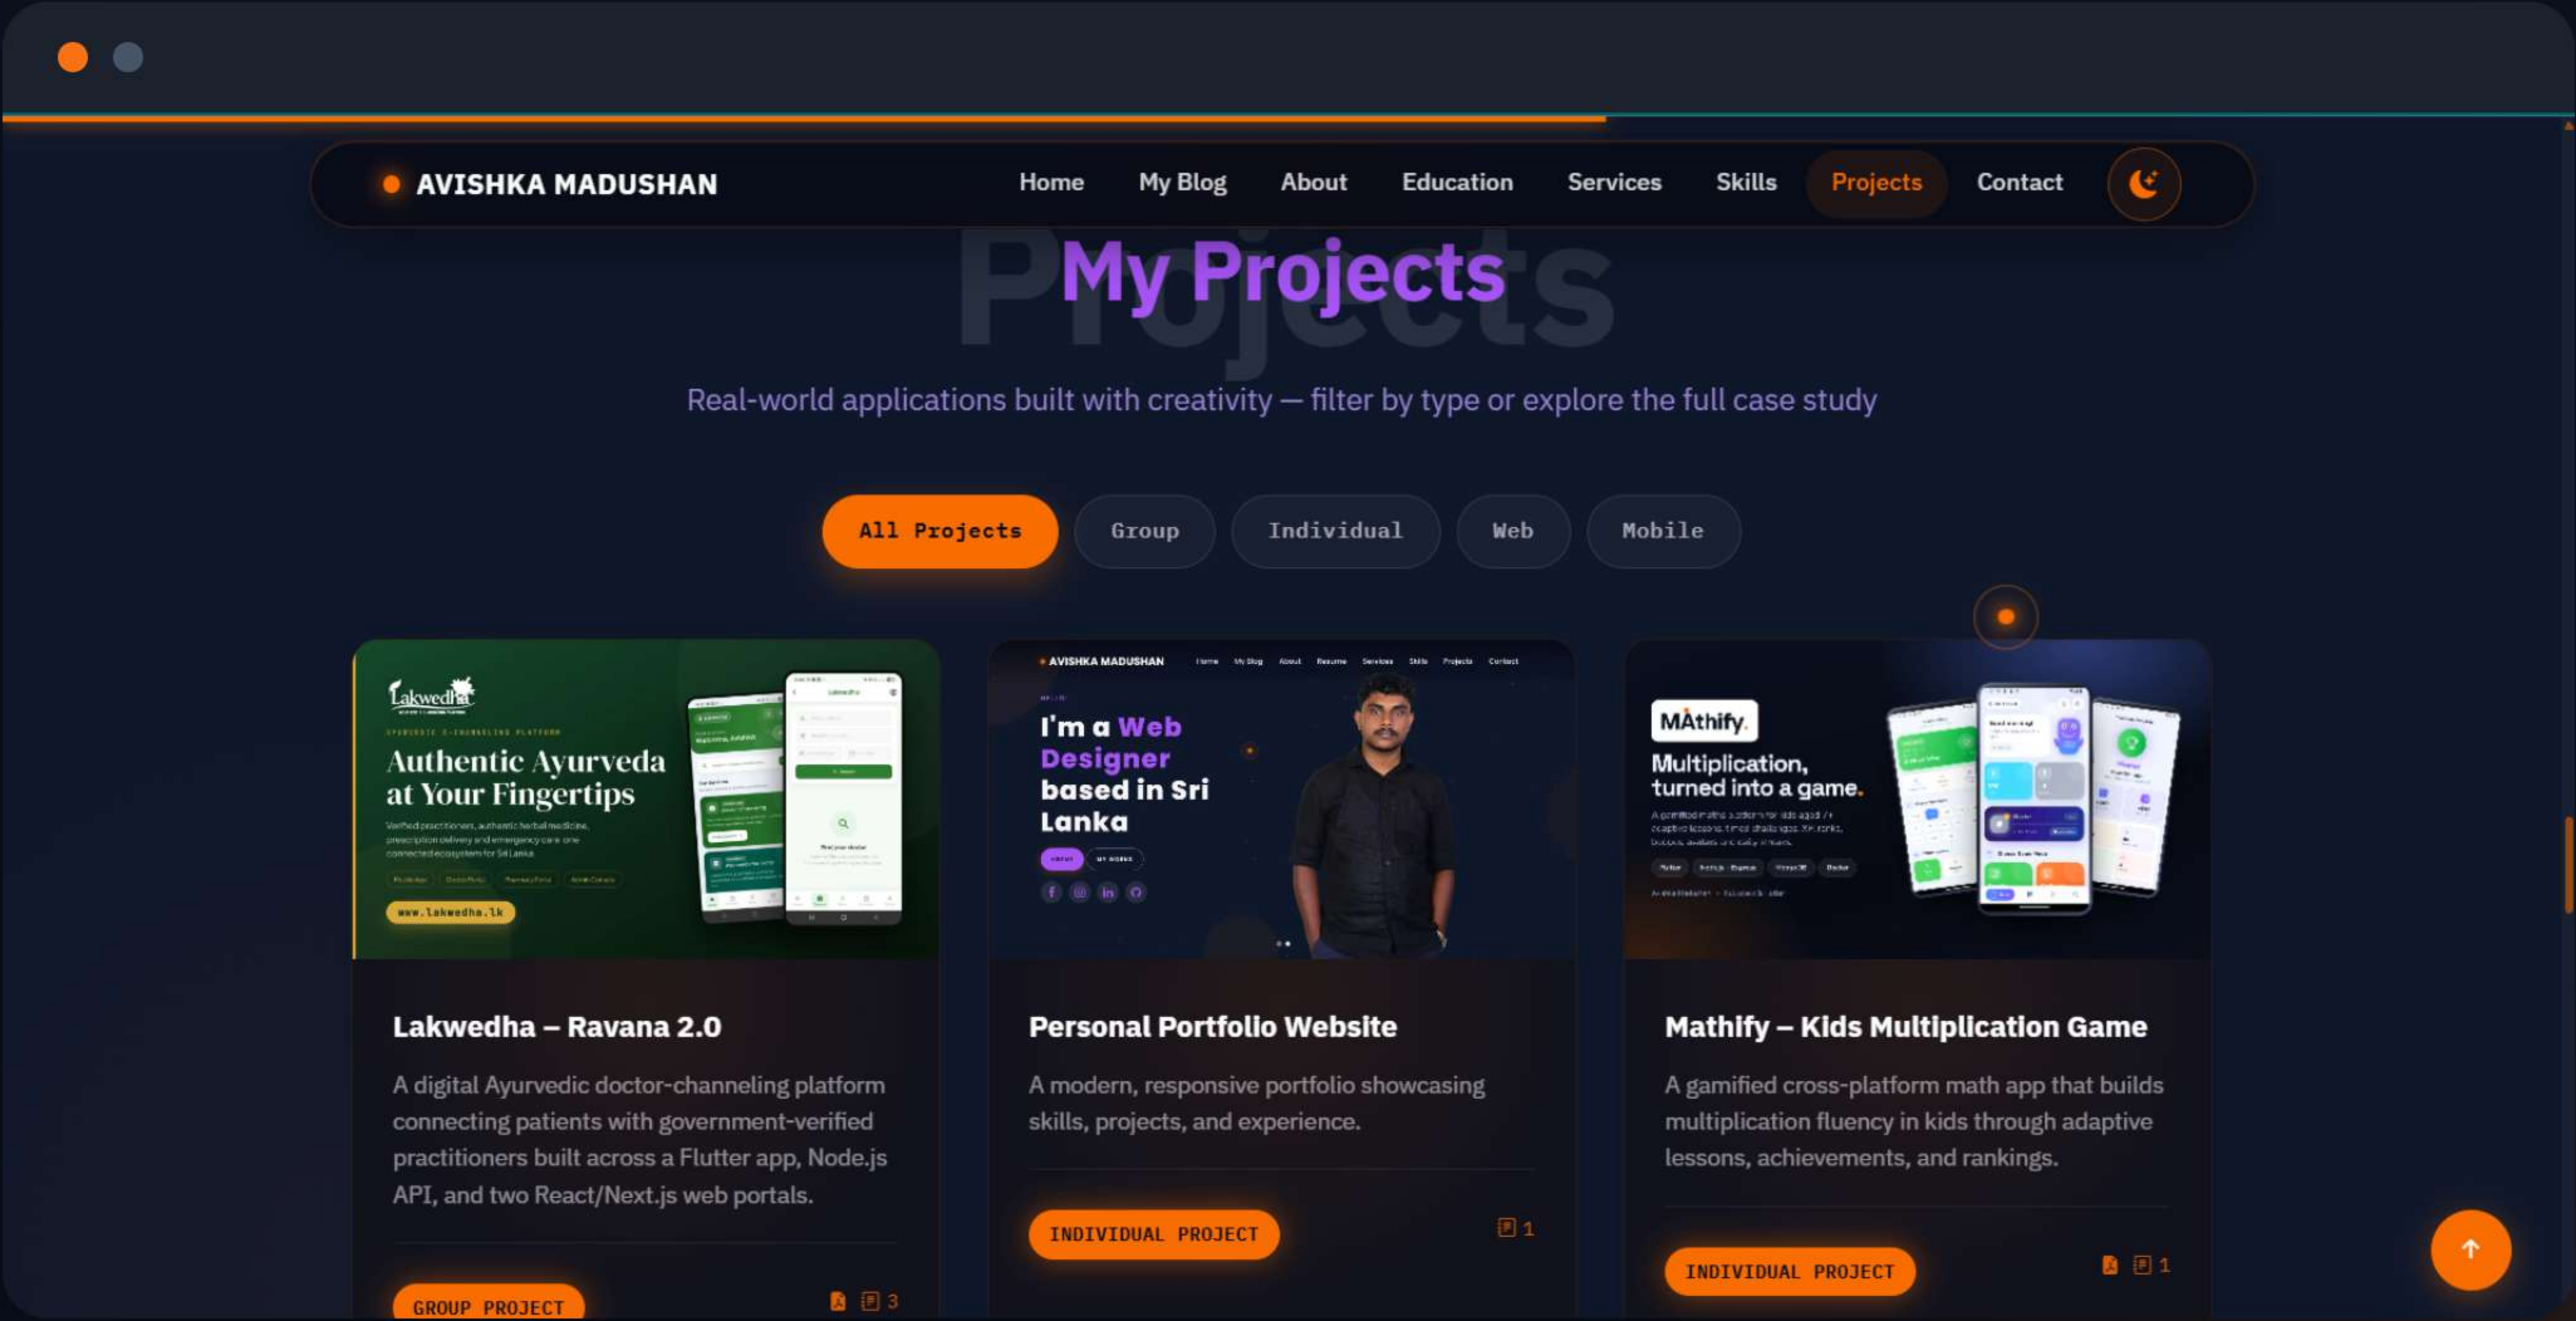

Degrees and certifications alternate down a live spine, each node badged in progress or completed.

PROJECTS

Filterable grid, one data source.

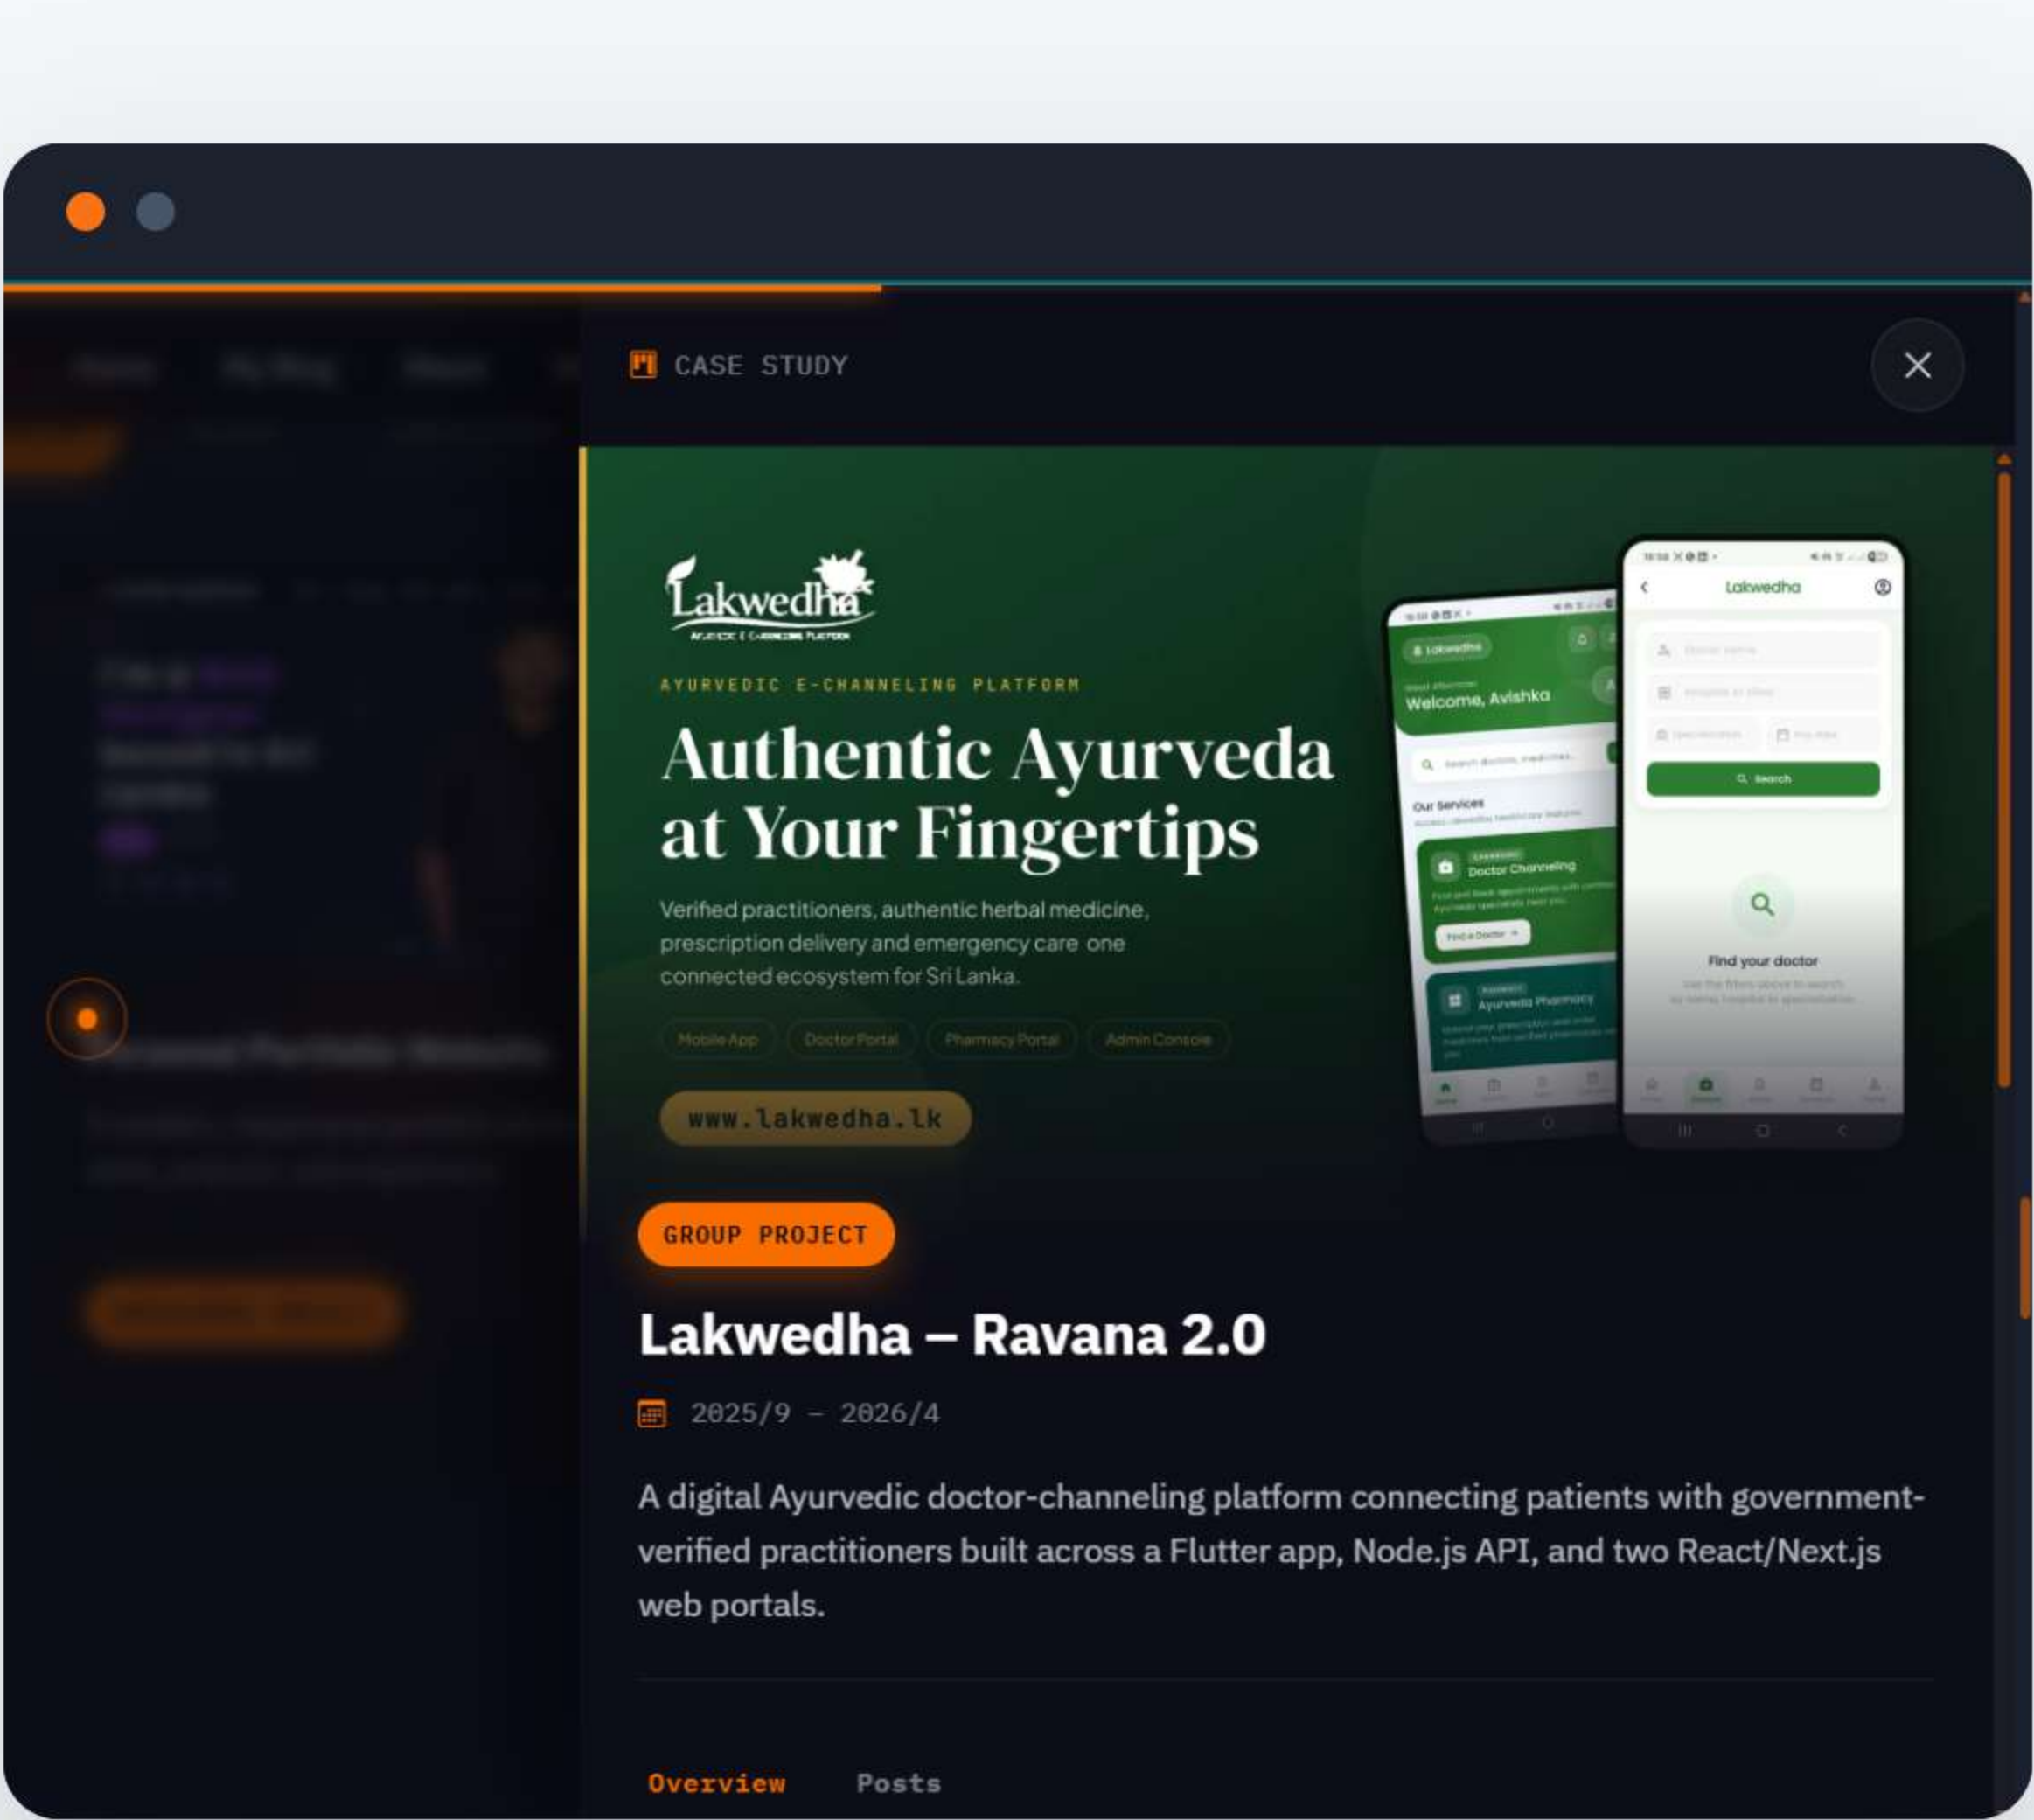

All · Group · Individual · Web · Mobile the filter rewrites the grid from the same `projectData` array that feeds every case-study modal.

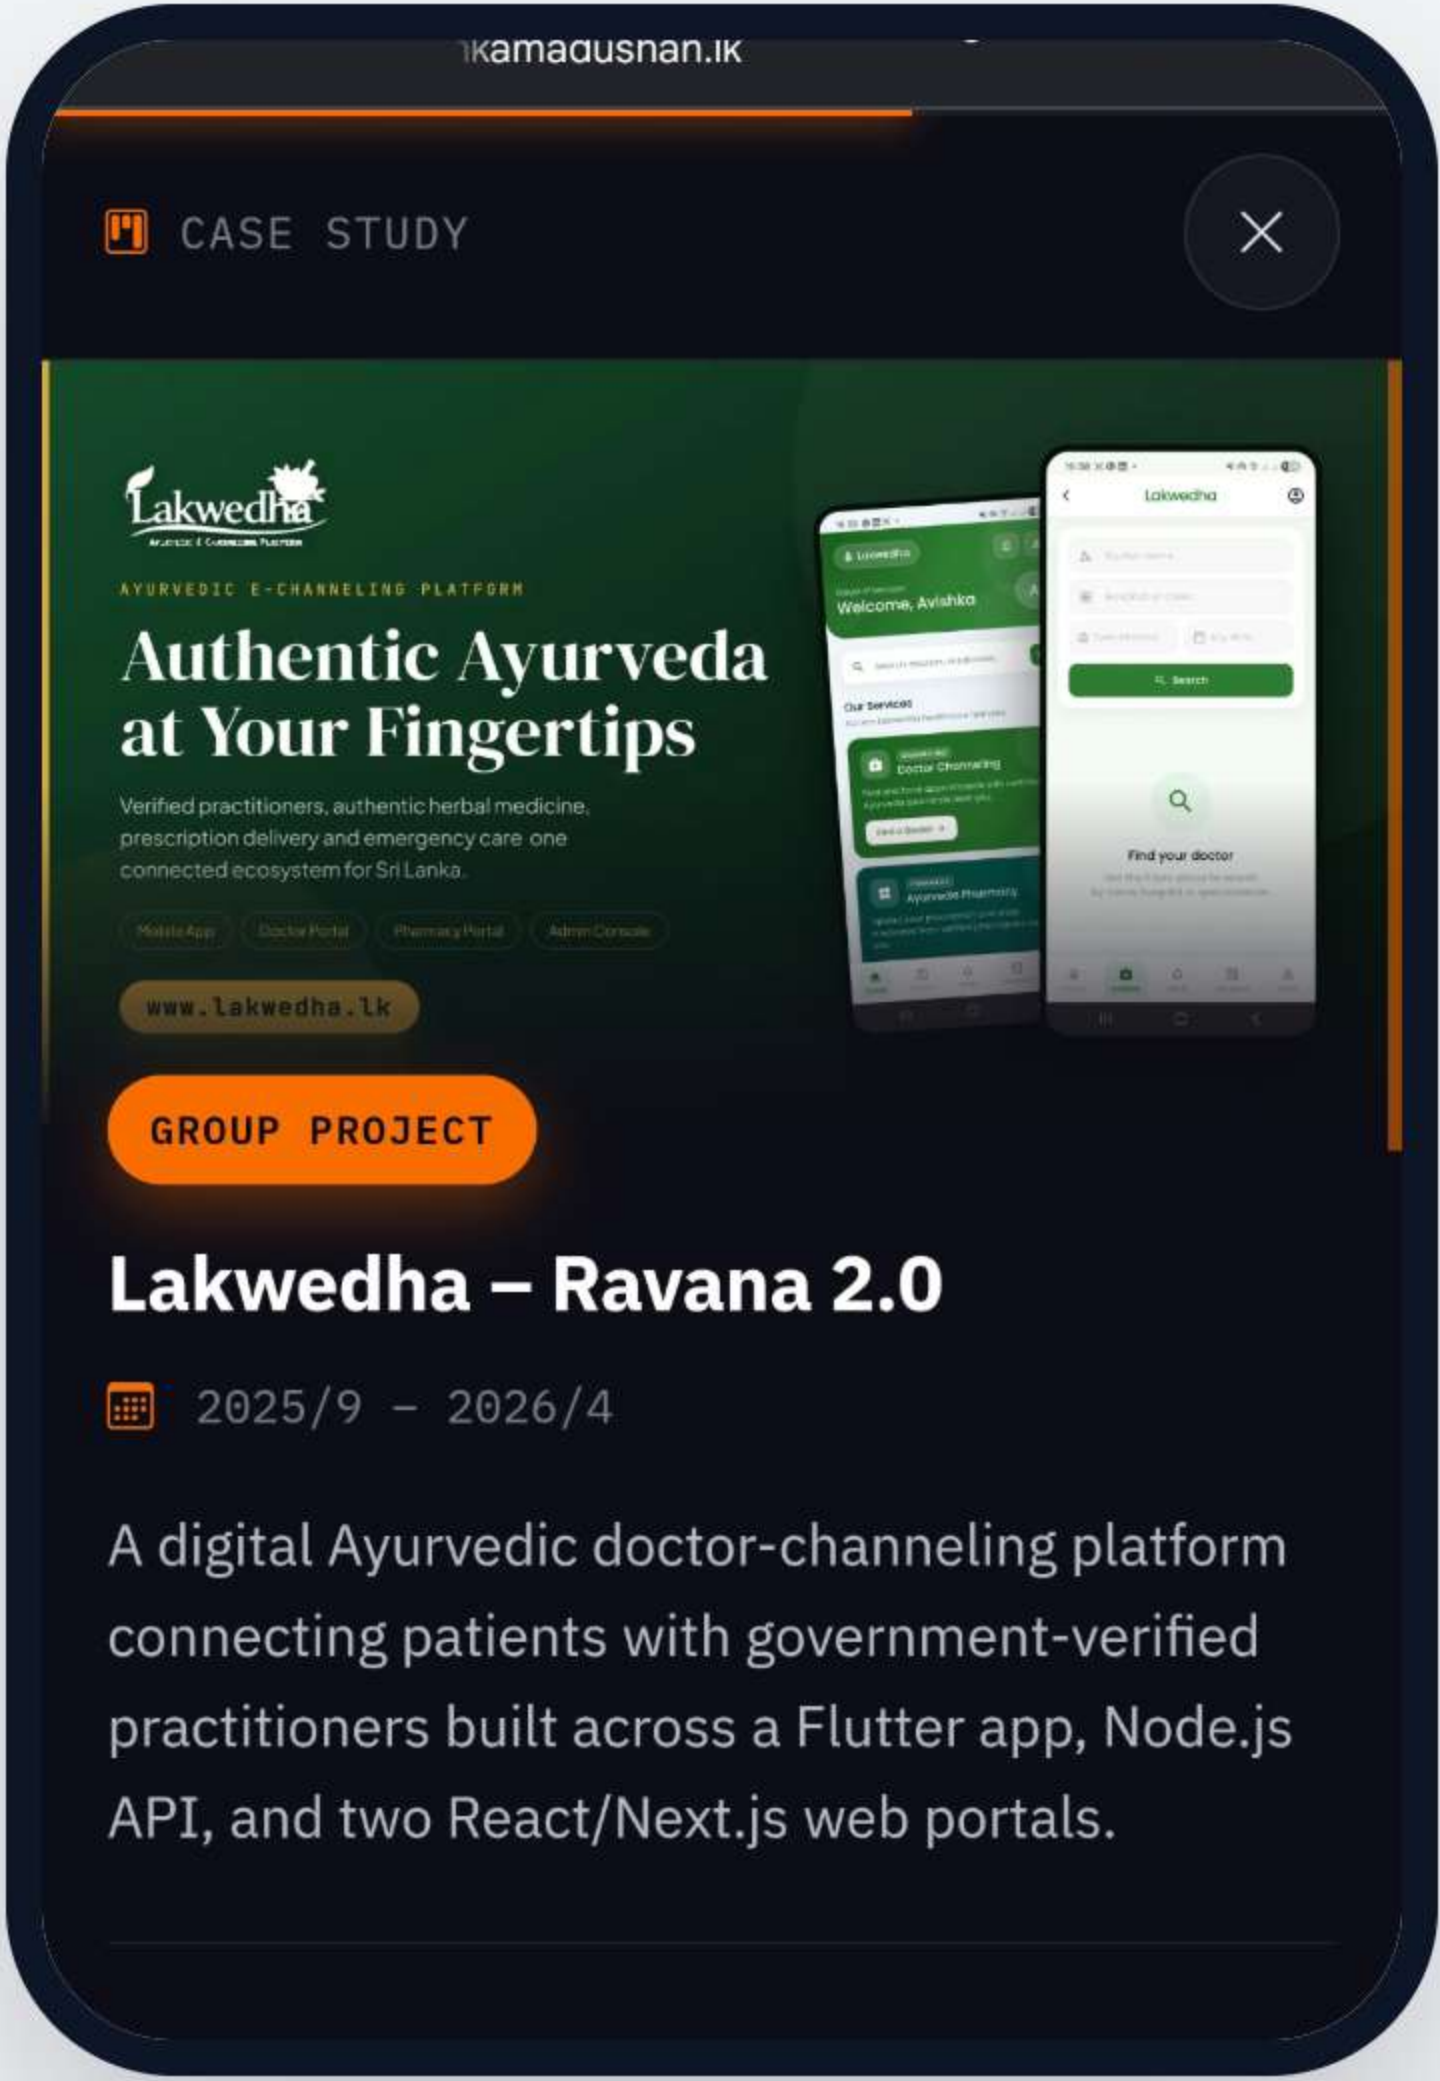

CASE STUDIES

Every project opens as a full case study.

One modal per project stack, feature list, timeline, GitHub and demo links, a downloadable PDF report and the update history.

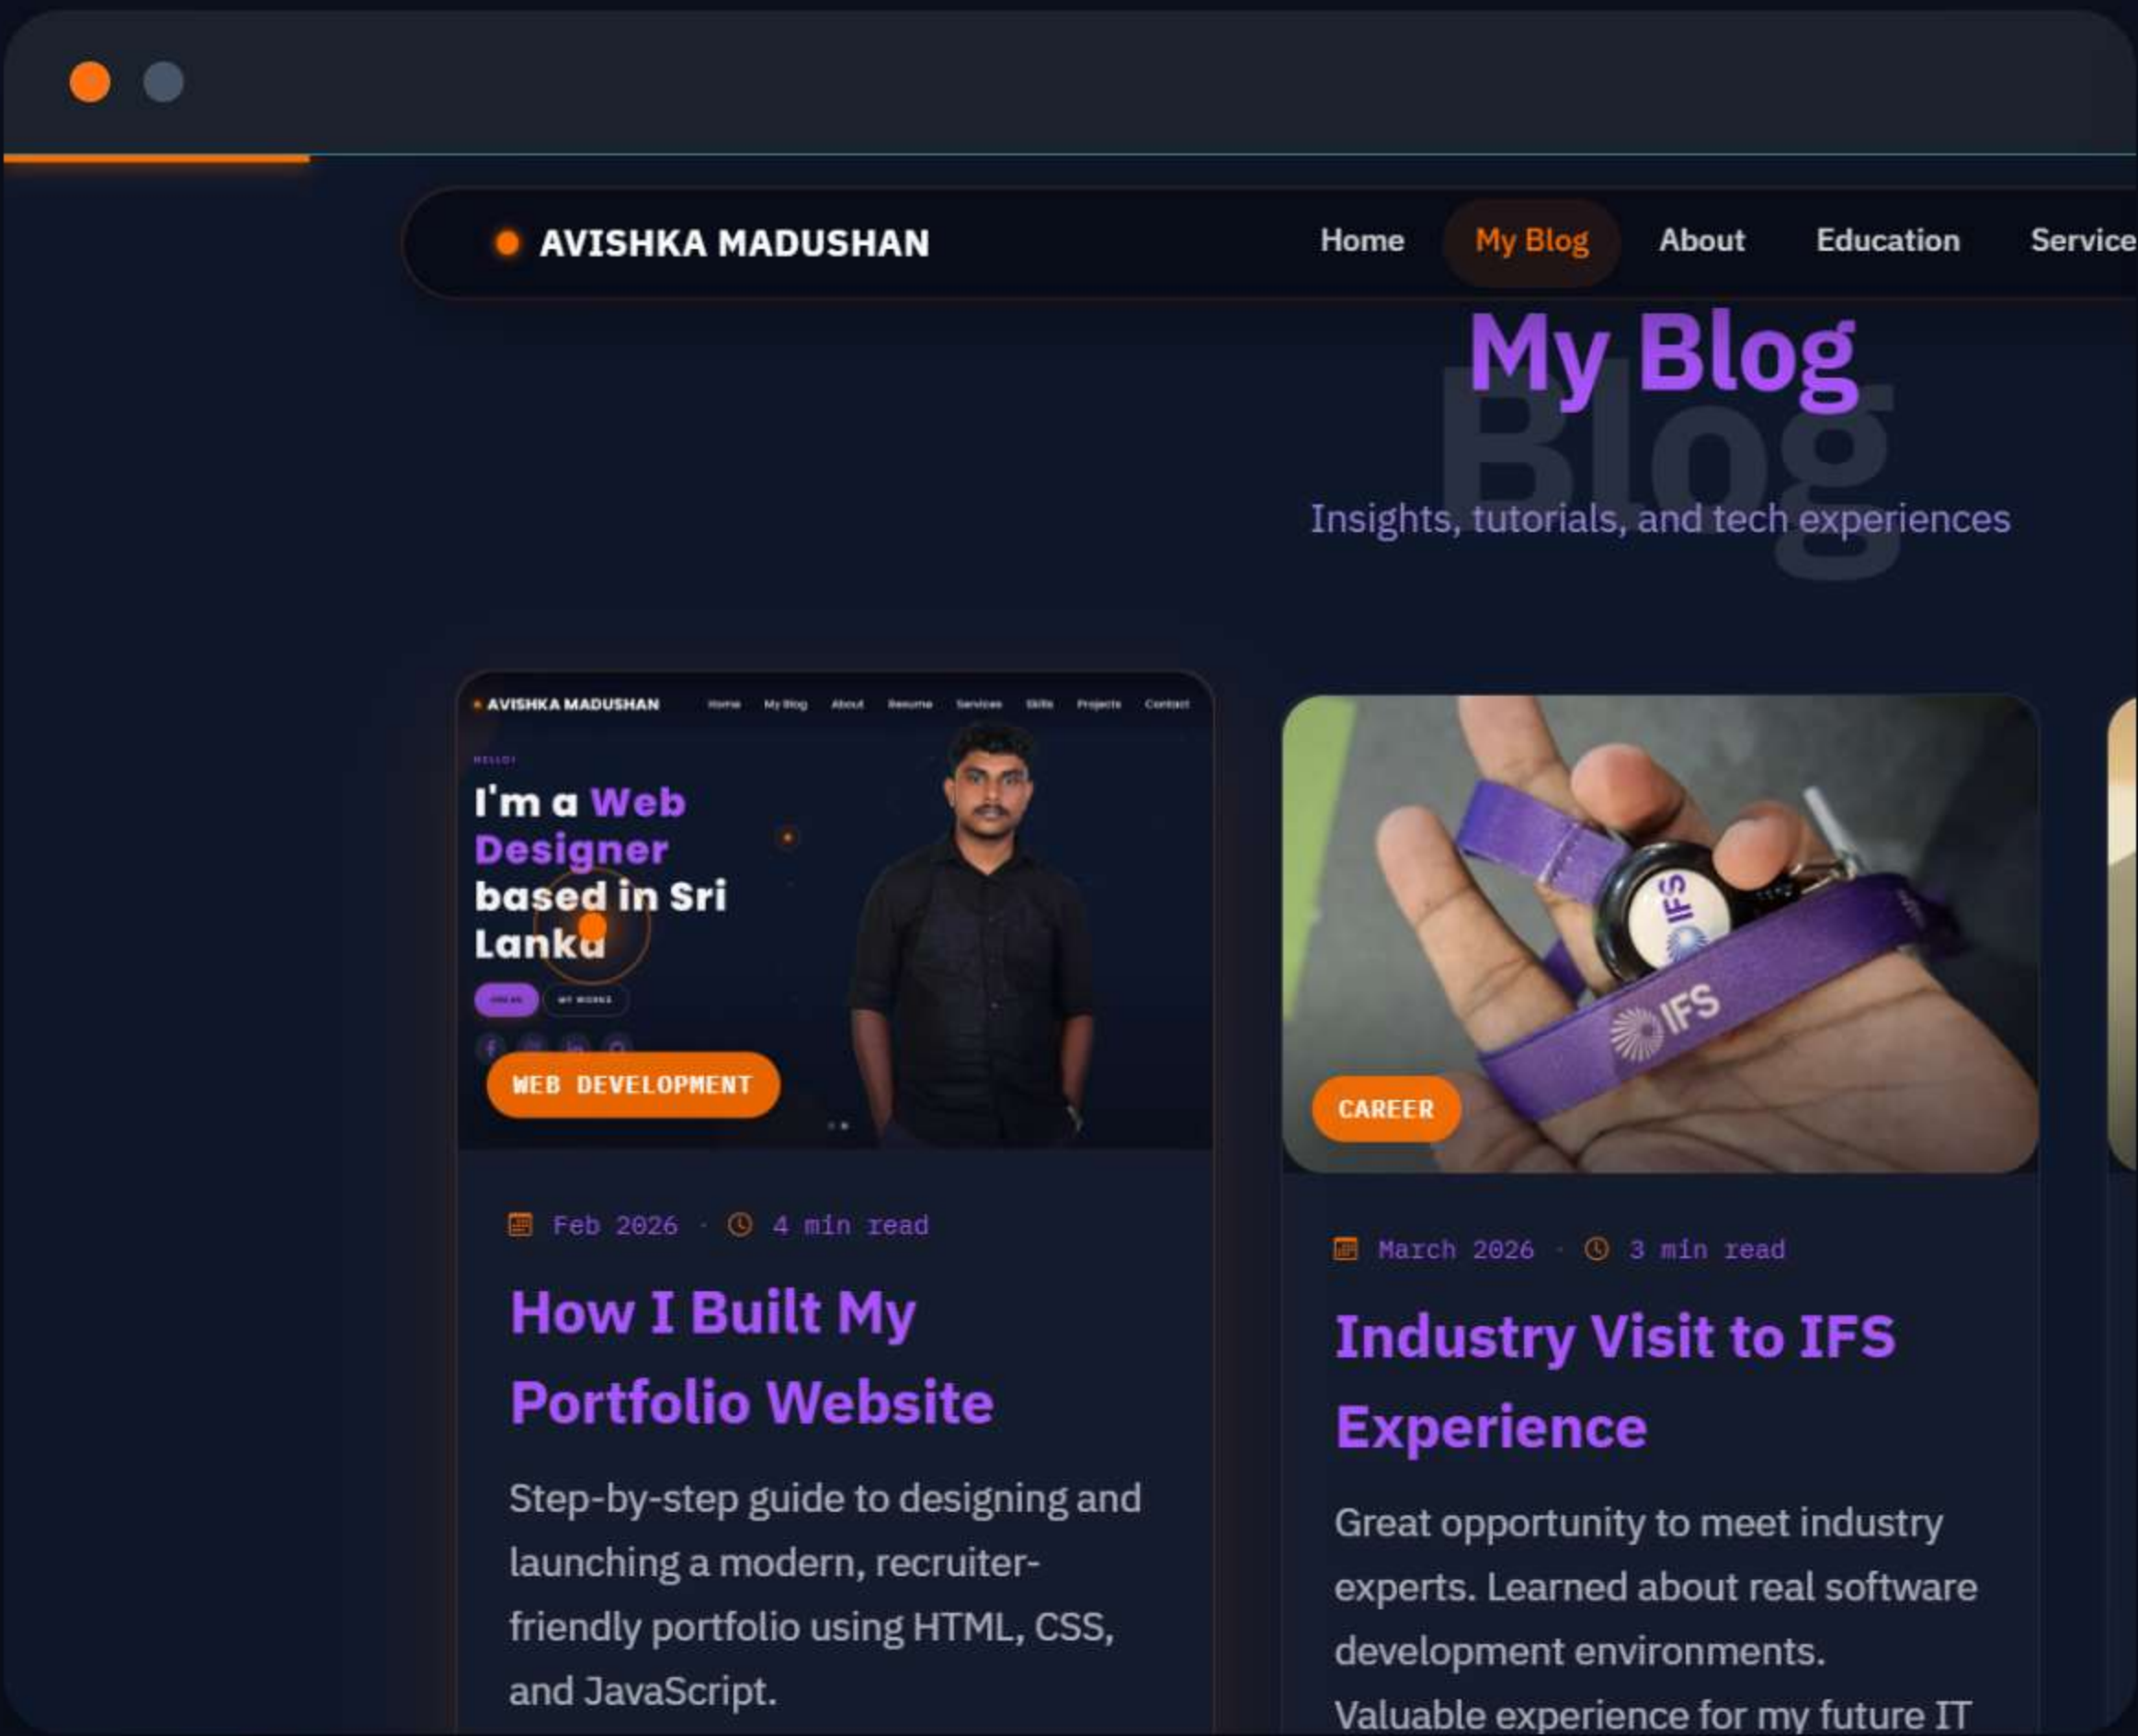

case-study modal · desktop

same modal · mobile

A portfolio that keeps writing.

Articles on the build itself, the IFS industry visit and IIT Career Day 2026 each opening in a reader view with category, date and read time.

blog grid · desktop

reader · mobile

Engineered to be found and read.

Search engines, social previews, AI crawlers and assistive tech all get a first-class version of the same page.

Structured data

JSON-LD describing the person, the site and the work

Rich social previews

Open Graph and Twitter Card tags on every share

llms.txt

A written summary for AI and LLM crawlers, alongside robots.txt and sitemap.xml

Accessible by default

Forced-colors and reduced-motion overrides, semantic landmarks
